新疆地区和硕县和图木舒克市
妇女创新创业实践调研

巾帼石榴花 乡村“她”力量

Excerpt Key

2023 marks the inaugural year for comprehensively implementing the guiding principles of the 20th CPC National Congress. General Secretary Xi Jinping emphasized: "A strong nation must first have a strong agriculture; only with a strong agriculture can the nation be strong." Implementing the rural revitalization strategy is a major strategic deployment made by the Party Central Committee with Comrade Xi Jinping at its core, based on the overall interests of the Party and the country, with a view to achieving the "Two Centenary Goals" and the Chinese Dream of the great rejuvenation of the Chinese nation. Women are an important force in promoting the modernization of agriculture and rural areas. They are not only the beneficiaries of rural revitalization but also its promoters and builders. The All-China Women's Federation released the "Implementation Opinions on Launching the 'Women's Action for Rural Revitalization'" in 2018, extensively mobilizing rural women to participate in rural economic development. Against the backdrop of "rural hollowing-out," an increasing number of rural women are entering industries such as production, handicrafts, and services. Through innovation and entrepreneurship, they are driving the socioeconomic and cultural development of rural areas, emerging as a "women's force" supporting rural revitalization. Taking Tahachi Town in Heshuo County and Tumushuk City in Bayingolin Mongol Autonomous Prefecture, Xinjiang as case studies, this project employs questionnaires, interviews, and case analysis to explore: - The current status of support measures and assistance provided by governments and various sectors in Yangtze River Delta cities paired with Xinjiang under the guidance of Xi Jinping Thought on Socialism with Chinese Characteristics for a New Era; - Relevant policies supporting rural revitalization based on the actual conditions of Heshuo County and Tumushuk City; - How rural women can achieve employment and entrepreneurship through vocational knowledge and skills training to eliminate absolute poverty; - Feasible pathways for leveraging women's innovation and entrepreneurship education and practice to boost rural revitalization. analyzing how rural women can achieve employment and entrepreneurship to eliminate absolute poverty through vocational knowledge and skills training. It also explores feasible pathways for women's innovation and entrepreneurship education to propel rural revitalization.

The study yielded four key findings: First, women in both regions demonstrate awareness, sentiment, intention, and action regarding innovation and entrepreneurship. In terms of "awareness," their understanding of the relationship between the "rural revitalization strategy" and innovation/entrepreneurship practices requires deepening. Regarding "sentiment," they generally recognize the practical value of innovation and entrepreneurship. Concerning "intention," they exhibit strong willingness to participate. However, their "action" in implementing innovation and entrepreneurship practices needs to be improved. Second, both regions have documented successful women-led innovation and entrepreneurship cases. Key factors include policy support, government leadership, individual initiative, and inspirational guidance. Third, challenges persist in women's innovation and entrepreneurship across both areas. Specific obstacles include lack of specialized skills training, insufficient social support, heavy household burdens, constraints from traditional mindsets, and inadequate policy outreach. IV. Factors constraining women's innovation and entrepreneurship practices in both regions are both internal and external. Internally, these include women's own cognitive levels affecting their participation in educational and training activities, as well as the perception of fixed roles for rural women in household labor. Externally, existing training content is not aligned with agricultural

巾帼石榴花
乡村“她”力量

rural women's cognitive levels, as well as the mismatch between training channels and teaching resources and women's cognitive levels.

To further incentivize women's innovation and entrepreneurship for rural revitalization, it is necessary to: 1. Strengthen national macro-level guidance by enhancing publicity of policies related to rural revitalization and women's innovation and entrepreneurship, encouraging Xinjiang women to pursue independent innovation and entrepreneurship while providing more resources and policy support; From the perspective of support through counterpart assistance from the Yangtze River Delta region to Xinjiang, frameworks should be established for counterpart assistance cooperation to fully leverage resource complementarity with Xinjiang, implementing project-based, industrial, and educational assistance programs. In terms of mobilizing diverse forces for support, strengthened collaboration among local governments, social entities, and individual women is essential to advance innovation and entrepreneurship.

For a nation to thrive, its countryside must flourish. Guided by Xi Jinping Thought on Socialism with Chinese Characteristics for a New Era, the entrepreneurial environment for rural women will become more inclusive and supportive. Through concerted efforts, every rural woman will unlock boundless potential, shining brightly in her chosen field. They will contribute their unique strength to societal progress and national prosperity, letting pomegranate blossoms bloom across the motherland as they jointly compose a magnificent new chapter of women's empowerment in the new era.

Chapter 1 Introduction

Rural revitalization in the Xinjiang Uygur Autonomous Region is integral to the comprehensive advancement of the rural revitalization strategy. Having officially lifted itself out of poverty on November 23, 2020, the region now faces formidable development challenges. It must effectively bridge the consolidation and expansion of poverty alleviation achievements with rural revitalization. As a vital force in rural development, exploring how women's innovation and entrepreneurship can contribute to rural revitalization is particularly necessary. This section clarifies why the research is conducted by addressing the background, objectives, and significance of the topic; defines the core concepts and research questions through a literature review; and outlines the methodology to explain how the research will be conducted.

Section 1: Research Overview

I. Research Background and Objectives

(1) Research Background

The Rural Revitalization Strategy represents the strategic arrangement for **"agriculture, rural areas, and farmers"** work in the new era as outlined at the 19th CPC National Congress. General Secretary Xi Jinping emphasized: **"Innovation is the soul of social progress, and entrepreneurship is a vital pathway for driving economic and social development and improving people's livelihoods."** Farmers are the direct beneficiaries of rural revitalization and its primary participants. **"Women's strength"** refers to the power demonstrated by female groups across all sectors of society. During urbanization, rural left-behind women have gradually become the main permanent population in villages and represent a force that cannot be overlooked in rural revitalization.

"Rural hollowing-out" refers to the phenomenon where the permanent rural population steadily declines, with severe outflow of young and able-bodied laborers, leaving increasing numbers of elderly, women, and children behind. This phenomenon not only drives large numbers of young people to seek work or settle in cities, but also restricts agricultural production in rural areas due to labor shortages. This hollowing-out is accompanied by resource outflows, including land transfers and the closure of rural enterprises. This leads to resource wastage and environmental issues in rural areas, posing challenges to sustainable rural revitalization. As populations migrate, social service facilities like education, healthcare, and cultural institutions in rural areas gradually diminish, lowering the quality of public services available to residents and impacting their quality of life.

In 2018, the All-China Women's Federation issued the "Guiding Opinions on Launching the **'Women's Action for Rural Revitalization'**,"

The document states that "women are a vital force in advancing agricultural and rural modernization; they are not only beneficiaries of rural revitalization but also its promoters and builders." Thus, rural women constitute a significant driving force in rural development, leveraging their "women's strength" through innovation, entrepreneurship, and other initiatives to support rural revitalization.

Since the founding of the People's Republic of China, the central government and some provinces and municipalities have provided continuous assistance to Xinjiang: 1996

巾帼石榴花
乡村“她”力量

, to promote Xinjiang's development and maintain its stability, the central government made the major strategic decision to launch the Xinjiang Aid Program.

The first round of assistance to Xinjiang was formally launched. The second round of assistance, initiated in 2010, aimed to minimize the gap between Xinjiang and other parts of the country to the greatest extent possible, ensuring that Xinjiang achieves a moderately prosperous society in all respects by 2020. To this day, the policy of paired assistance to Xinjiang continues.

"Yangtze River Delta Pairing Assistance to Xinjiang" is a significant domestic policy initiative in China, designed to support economic development and social stability in the Xinjiang Autonomous Region. The Yangtze River Delta, an economically advanced region in eastern China encompassing Shanghai, Jiangsu Province, Zhejiang Province, and Anhui Province, possesses strong economic strength and resource advantages. Through pairing assistance, it can promote rapid development across various regions of Xinjiang. The core principle of the Yangtze River Delta-Xinjiang policy is to foster economic growth, improve livelihoods, and enhance social stability in Xinjiang through regional cooperation. Specific measures may include financial support, technological collaboration, and talent development initiatives.

Therefore, our research topic is finalized as "Women's Pomegranate Blossoms: Rural 'She' Power—A Survey on Women's Innovation and Entrepreneurship Practices in Heshuo County and Hotan City, Xinjiang." Using Tahachi Town in Heshuo County, Bayingolin Mongol Autonomous Prefecture, and Hotan City as case studies, we will investigate the current state of rural women's innovation and entrepreneurship practices through questionnaires and interviews. This study explores how rural women can achieve employment and entrepreneurship by acquiring vocational knowledge and skills, thereby eliminating absolute poverty and advancing rural revitalization.

(II) Research Objectives

Women are an indispensable force in rural revitalization, and their innovation and entrepreneurship have become a crucial means to support this endeavor. Using the examples of Tahachi Town in Heshuo County and Hotan City in Xinjiang's Bayingolin Mongol Autonomous Prefecture, this study employs questionnaires, interviews, and case analysis to understand the current state of women's innovation and entrepreneurship in rural areas. It analyzes the primary challenges and their causes, offering recommendations on how women's innovation and entrepreneurship can drive rural revitalization. It explores exemplary cases of women's innovation and entrepreneurship practices, examining how rural women can achieve employment and entrepreneurship through vocational knowledge and skills training to eliminate absolute poverty and advance rural revitalization. The study also identifies feasible pathways for women's innovation and entrepreneurship education to propel rural revitalization.

II. Research Significance

The Implementation Opinions on Carrying Out the "Women's Action for Rural Revitalization" () () state that women are a vital force in advancing agricultural and rural modernization. They are not only beneficiaries and recipients of rural revitalization but also its promoters and builders. The Implementation Opinions specify that the primary tasks of the "Women's Action for Rural Revitalization" include strengthening ideological guidance, mobilizing rural women to actively participate in and contribute to rural revitalization, and building a modernization and are not only beneficiaries of rural revitalization but also its promoters and builders. The Implementation Opinions clarify that the primary tasks of the "Women's Action for Rural Revitalization" include strengthening ideological guidance to mobilize rural women to actively participate in the rural revitalization strategy; implementing the "Rural Women's Quality Enhancement Plan" to improve rural women's qualities and capabilities for participating in rural revitalization; and launching the "Beautiful Hometown" construction campaign to guide rural women in jointly building beautiful villages.

rural revitalization; launching the "Beautiful Homeland" () construction initiative to guide rural women in jointly building and sharing ecologically livable new rural homes; expanding the scope of the "Search for the Most Beautiful Families" campaign to promote civilized family traditions and rural culture; and continuing to deepen the "Women's Poverty Alleviation Action" to enhance the sense of fulfillment among impoverished women.

Since the 18th CPC National Congress, the Party Central Committee with Comrade Xi Jinping at its core has, from the perspective of the overall development of the Party and the country, cared for and supported the comprehensive development of women, planned and deployed the advancement of women's work, inspired hundreds of millions of women to stride forward and pursue their dreams on the new journey toward the great rejuvenation of the Chinese nation, and encouraged and supported women to engage in economic and social development practices, contributing their strength to national rejuvenation and the building of a strong country.

As the saying goes, women hold up half the sky. Women are no less capable than men, and their strength is boundless. Since the founding of New China, the status of women in our country has continuously improved, with significant progress made in addressing historical gender inequalities. Simultaneously, the importance of women's participation in public affairs has become increasingly prominent. Particularly in the current rural revitalization efforts, substantial human and material resources are required, and it is essential to harness the collective strength of women through group-building initiatives. By uniting our hearts and pooling our efforts, we can jointly build beautiful new rural communities. Women across the nation must stand united with the Party and advance alongside it. strengthen their faith in women's empowerment through the practice of new ideas, demonstrate their responsibility and action in advancing the new journey, showcase their unique role in leading new trends, and create brilliant lives for women by reaching new heights. With a stronger sense of historical consciousness and a more spirited demeanor, they will compose an even more splendid chapter for "half the sky" on this new journey.

Rural women are a vital force in rural revitalization and a crucial pillar in building a new socialist countryside. However, influenced by traditional feudal ideas from the old society, most women remain confined to the mindset of serving their husbands and raising children. Their perspectives, thinking, and emotions remain constrained by male- and family-centered consciousness, preventing a complete liberation of their true ideas and concepts. Compounded by the burdensome demands of household responsibilities, they lack sufficient energy to dedicate to rural revitalization efforts, resulting in low overall participation and limited substantive contributions.

For the effective implementation of rural revitalization, particularly in the Xinjiang region examined in this study, the national "Yangtze River Delta-Xinjiang Pairing Assistance" policy holds significant importance. It not only positively impacts China's overall economic and social development but also plays a crucial role in promoting the development and stability of the Xinjiang Uygur Autonomous Region.

Promoting Xinjiang's Comprehensive Development. As China's economic core, the Yangtze River Delta possesses robust industrial foundations and technological advantages, enabling it to provide Xinjiang with financial, technical, and managerial support to accelerate economic growth. This facilitates industrial expansion, productivity enhancement, and job creation, thereby improving local living standards. Through targeted assistance, investments in education, healthcare, and infrastructure sectors can also be amplified.

巾帼石榴花
乡村“她”力量

Investments have been made to improve the basic living conditions of local residents, enhance educational standards, and elevate the quality of healthcare services.

Promoting coordinated regional development. The Yangtze River Delta's targeted assistance policy for Xinjiang contributes to balanced development across China's regions, narrowing the development gap between eastern and western areas. This helps dismantle regional development barriers, fosters equitable economic growth nationwide, and strengthens the nation's overall competitiveness.

Deepening national unity. Through the policy of targeted assistance to Xinjiang, residents from different regions can gain greater mutual understanding, promoting exchanges and integration among diverse ethnic groups and cultures. This helps deepen national unity and reduce differences and conflicts.

“Yangtze River Delta Pairing Assistance to Xinjiang” provides robust support for advancing rural revitalization in the new era and building a rural environment characterized by beautiful villages and harmonious village customs. All regions should align with societal and contemporary trends, effectively harnessing the positive contributions of women in practical work to engage more female talent in rural revitalization efforts and propel rural development. The primary objective of women's contributions to rural revitalization is to drive village development, achieve poverty alleviation and prosperity, and promote stable and rapid local economic growth. As women's participation in rural revitalization deepens, the harmonious coexistence of villages and the construction of beautiful rural landscapes will receive robust support.

III. Research Approach and Methodology

(1) Research Framework

This study uses innovation and entrepreneurship practices (including related education and training) as a bridge connecting rural women with rural revitalization. It focuses on analyzing how rural women can contribute to rural revitalization through innovation and entrepreneurship. The research framework is as follows:

(2) Research Approach

This study follows the research approach of " , " specifically:

(III) Research Methods

1. Questionnaire Survey Method

Women are an indispensable force in rural revitalization, and their innovation and entrepreneurship have become a crucial means to advance this cause. Using the examples of Tahachi Town in Heshuo County, Bayingolin Mongol Autonomous Prefecture, Xinjiang, and Tumushuk City, this study employs questionnaires, interviews, and case analysis to understand the current state of women's innovation and entrepreneurship in rural areas. It identifies key challenges and their underlying causes, proposing recommendations for leveraging women's innovation and entrepreneurship to drive rural revitalization. Explore exemplary cases of women's innovation and entrepreneurship practices. Analyze how rural women can achieve employment and entrepreneurship through vocational knowledge and skills training to eliminate absolute poverty and advance rural revitalization. Identify feasible pathways for women's innovation and entrepreneurship education to propel rural revitalization.

2. Interview Method

Through interviews with village Party branch secretaries and Women's Federation cadres in Heshuo County, understand the current status of women's innovation and entrepreneurship locally, including typical issues and practical experiences. typical challenges, and practical experiences.

3. Case Study Method

Explore typical cases of women's innovation and entrepreneurship practices. Analyze how rural women achieve employment and entrepreneurship through vocational knowledge and skills training to eliminate absolute poverty and advance rural revitalization.

巾帼石榴花
乡村“她”力量

entrepreneurship education practices to boost rural revitalization.

IV. Collection and Organization of Research Materials

(1) Surveys, Interviews, and Case Collection

In this project, team members collected research materials through a combination of online and offline methods. For surveys, an online questionnaire was distributed via Wenshu Xing to women in Heshuo County, Bayingolin Mongol Autonomous Prefecture, Xinjiang, and Tumushuk City, Third Division of the Xinjiang Production and Construction Corps. The target sample size was 100 questionnaires, with 264 valid responses collected.

264 valid responses. Detailed survey results are presented in Appendix I.

For interviews, field visits were conducted in Heshuo County, Bayingolin Mongol Autonomous Prefecture, Xinjiang, involving face-to-face offline discussions with local village Party branch members, Women's Federation cadres, and women residents. These conversations explored the current state of women's innovation and entrepreneurship locally, typical challenges, and practical experiences. The basic information of the interviewees is as follows. The interview outline and specific transcripts are provided in Appendix II.

Simultaneously, telephone interviews were conducted with women who participated in the training program to gather their perspectives on entrepreneurship training and rural revitalization.

访谈对象基本情况

受访者	年龄	文化程度	职业
G 女士	48	高中	村干部
Z 先生	35	本科	党支部书记
T 女士	57	小学	村民
H 女士	32	本科	妇联干部
D 女士	45	本科	副镇长

For case studies, team members identified local women with entrepreneurial experience through field research. They conducted on-site visits to Li Qinghua's experimental orchard, Zaimazai's Abudulimu's tofu shop, Li Guirong's tailor shop, and Aziguli Rehmatjiang's spicy chicken restaurant. Face-to-face exchanges with these entrepreneurs ~~the~~ team to better understand the challenges they encountered during their actual entrepreneurial journeys, their initial experiences, and the support provided by the government. Additionally, team members filmed processes such as planting, garment tailoring, and food preparation, recorded interview videos, and ultimately compiled and organized the materials into a final draft.

(II) Analysis of Research Materials

1. Personal Information Analysis

Statistical analysis of questionnaire respondents' personal information revealed that while age, family structure, and occupation showed little variation among local women, differences in education and income were significant. Over half of the surveyed women were aged 21-35.

showed little variation, while differences in education level and income were significant. Over half of the respondents in this survey were women aged 21-30 aged 21-30, accounting for 52% of the total. Next were women aged 31-40 and 41-50, representing 27% and 18% respectively, while respondents over 50 constituted a smaller proportion.

The household sizes of the respondents were concentrated between 2 and 5 people, with 43% of households consisting of 2-3 people and 50% of households consisting of 4-5 people. Regarding educational attainment, the largest proportion held associate degrees or higher (75%). Among the remaining respondents, 13% had high school diplomas, 5% had junior high school diplomas, and 7% had elementary school education or below. It is evident that the overall educational level of the respondents was relatively high, with more than half having received higher education. However, approximately one-quarter of the respondents still had lower levels of education.

The primary occupations of the surveyed individuals were concentrated in self-employment and farming or animal husbandry; 9% of women were classified as "rural cadres."

2. Case Analysis

By examining representative cases of local women's innovation and entrepreneurship practices, this analysis explores the underlying factors behind successful outcomes. It investigates how rural women can achieve employment and entrepreneurship through vocational knowledge and skills training to eliminate absolute poverty and advance rural revitalization. Furthermore, it identifies feasible pathways for leveraging women's innovation and entrepreneurship education to propel rural revitalization.

3. Questionnaire Reliability and Validity Analysis

To assess the consistency of survey results, we employed Cronbach's alpha reliability analysis, yielding a coefficient of 0.949. This indicates significant correlation among all questionnaire items (see Appendix III for details).

(Cronbach's Alpha Coefficient Table)

To evaluate whether the questionnaire adequately captured the core concepts under study, we conducted validity analysis using the KMO measure. The KMO value was 0.785, indicating the data were suitable for information extraction (see Appendix IV for details).

KMO 和 Bartlett 的检验			
KMO值		近似卡方	0.785
Bartlett 球形度检验		df	572.665
		p 值	45
			0.000

Section II: Literature Review

Focusing on the core research content, this study identified "Xinjiang Region," "Women," "Innovation" and "Supporting Rural Revitalization" as key terms for literature review. Based on domestic literature, a comprehensive review and analysis were conducted, ultimately forming the following research overview.

I. Conceptual Definitions

"Innovation and entrepreneurship" is the core concept of this study. It has both narrow and broad definitions: Narrowly defined, innovation refers to "the process of establishing new enterprises." Broadly defined, innovation and entrepreneurship encompasses "the process of creating endeavors," broadly referring to all pioneering social transformation activities undertaken by humanity. Specifically, innovation and entrepreneurship encompasses two components: innovation and entrepreneurship education and innovation and entrepreneurship practice. Innovation and entrepreneurship education is based on innovation theory, aiming to cultivate students' innovative awareness, thinking, and capabilities. Through reforms in curriculum systems, educational content, and teaching methods, as well as the implementation of practical teaching, it enhances the entrepreneurial willingness, spirit, and skills of the learners. It internalizes these qualities into the foundational competencies of the learners, ultimately cultivating entrepreneurial talents capable of applying their knowledge effectively under suitable conditions.¹ Innovation and entrepreneurship practice, however, refers to entrepreneurial activities based on innovation in one or more areas such as technological innovation, product innovation, brand innovation, service innovation, business model innovation, management innovation, organizational innovation, market innovation, or channel innovation. In this paper, innovation and entrepreneurship is defined in a narrow sense, referring to rural women learning and applying a new technology in practice.

II. Literature Review

In recent years, with socioeconomic development, rural women have emerged as a key group driving social progress. Through innovation and entrepreneurship, they have significantly advanced China's new rural construction. Research reports on rural women's entrepreneurship continue to emerge.

(1) Research on Rural Women's Labor Force Situation

Rural women constitute a vital force in rural modernization, yet the overall quality of this group still requires improvement. Deng Aiqun argues that rural women's employment is directly linked to social systems, policies, and other factors.² Lu Chunping points out that due to their relatively low professional qualifications and limited labor skills, rural women face disadvantages in the job market, often confined to manual labor occupations. This results in generally lower incomes among rural women.

¹ Zhang Lichang. Innovation, Educational Innovation, Innovative Education [J]. Journal of East China Normal University, 1999, 7(2):11-14.

² Deng Aiqun. Strengthening Vocational Skills Training for Rural Women to Enhance Their Entrepreneurship and Employment Capabilities [J]. Sichuan Agricultural Machinery, 2011, 12(02): 18-19

It is believed that various sectors of society should pay attention to the employment situation of rural women and provide them with certain assistance³. Chao Xiaoli pointed out

Rural women are the main force in rural modernization, powerful drivers of accelerated urbanization, and influential agents in promoting sustainable rural development⁴. Zheng Daofu's research focuses on the transfer of surplus female labor in rural ethnic areas of Hubei Province, exploring regional issues related to this migration. Through an in-depth analysis of the obstacles to rural female labor transfer, he proposes ideas and recommendations for improving the transfer of surplus labor⁵.

(II) Research on Rural Women's Innovation and Entrepreneurship

Practices of innovation and entrepreneurship among rural women have emerged. Huo Hongmei points out that entrepreneurship serves as an effective

pathway for rural women to enhance the quality of employment

and improve their family and social status⁶. Chen Xiaohong objectively describes the current state of rural women's entrepreneurship in China, systematically analyzes the difficulties and challenges they face in the entrepreneurial process, and concludes with constructive suggestions for improvement and development, including policy support, entrepreneurial training, and social support⁷. Li Mei conducted variable data analysis on the factors influencing entrepreneurship among returning female migrant workers in ethnic regions through model selection and data, summarizing fundamental conclusions from regression results to enhance the reliability of analyses on these factors⁸. Jiang Yunhua found that agriculture is no longer the sole development path for rural women, with the proportion of those engaged in services and construction now approaching that of traditional agriculture⁹. These studies provide valuable insights and research findings for deepening our understanding of rural women's entrepreneurship.

Simultaneously, these studies propose policy recommendations and solutions, offering valuable references for promoting rural women's entrepreneurship and addressing related challenges.

Chapter 2: Survey on Women's Innovation and Entrepreneurship Practices in Heshuo County and Hotan City

Section 1: Overview of Heshuo County and Hotan City

Heshuo County belongs to Bayingolin Mongol Autonomous Prefecture, Xinjiang Uygur Autonomous Region. It is located in the central part of Xinjiang Uygur

Autonomous Region

, at the southern foothills of the Tianshan Mountains and the northeastern part of the Yanqi Basin. The county's administrative area spans 12,800 square kilometers, encompassing mountainous regions, plains, and basins. This diverse topography provides favorable conditions for local agriculture, animal husbandry, and tourism. The dominant industries in Heshuo County are agricultural and livestock product processing and mineral product processing, with distinctive competitive sectors including stone processing, wine production, and facility agriculture. Zhangjiakou City, Hebei Province, and Heshuo County have continuously strengthened exchanges and cooperation, establishing multi-channel, multi-format communication and interaction platforms. This collaboration promotes the dissemination and application of scientific and technological achievements between the two regions, playing a positive role in jointly advancing high-quality development. The CPC Zhangjiakou Municipal Committee and Municipal Government resolutely implement the major policies and decisions for counterpart assistance to Xinjiang in the new era. Overcoming their own difficulties, they treat Heshuo with genuine care and responsibility, regarding it as Zhangjiakou's 20th county. They focus their efforts on industrial assistance, employment assistance, poverty alleviation assistance, livelihood support, educational assistance, and group-based aid. They have combined external support with capacity-building, hardware with software, and emphasized innovative approaches to aid, continuously enriching the content of assistance. This has formed a comprehensive, multi-level, and broad-based counterpart aid framework, yielding abundant results. Since 2010, Zhangjiakou has implemented over 160 assistance projects in Heshuo, investing 277 million yuan in aid funds and attracting 4.03 billion yuan in social capital.

148 Party and government cadres and professional technical personnel to Heshuo County to carry out counterpart assistance work. To promote social stability, rural revitalization, economic development, livelihood improvement, ethnic unity, and social progress in Heshuo County, we have injected a powerful "Zhangjiakou" impetus.

in social stability, rural revitalization, economic development, livelihood improvement, ethnic unity, and social progress.

The Third Division Tumshuk City is situated at the heart of Xinjiang Uygur Autonomous Region, centrally located among the four prefectures of Kashgar, Aksu, Kizilsu, and Hotan. It serves as China's frontier for opening up to Central Asia, West Asia, and South Asia, and is a key city along the new Eurasian Land Bridge—the China-Kyrgyzstan-Uzbekistan Railway—which is being developed as an extension of the Western Corridor from Kashgar. Tumshuk boasts a pleasant climate and serves as a production base for cotton, grain, and fruits. Its desert landscapes, mountain ranges, and pristine poplar forests encapsulate the natural beauty of the Western Regions, while also being one of the birthplaces of the Dola culture. Known in Chinese as Tumshuk, it is also called Tangwangcheng Weitou Prefecture. Since 2021, Guangdong Province has provided substantial financial support and implemented concrete measures to assist the Third Division Tumshuk City through targeted support initiatives.

These projects have generated tangible benefits for the local workforce.

and continuously enhancing their sense of fulfillment, happiness, and security. Additionally, over the past three years, Guangdong Province has

A total of 223 cadres and professionals were dispatched to Xinjiang to assist the Second Division Tumushuk City in addressing shortcomings and strengthening weaknesses in urban planning, industrial development, and technological innovation. **"Group-based"** medical and educational assistance was implemented, establishing renowned physician and teacher studios. Adhering to a dual-pronged approach of **"bringing in"** and **"going out,"** leveraging the advantages of Xinjiang aid resources, 2,827 cadres from the Third Division and Tumushuk City participated in training and job shadowing programs in Guangdong, further broadening their horizons and enhancing their professional capabilities.

Section 2: Background Research on Innovation and Entrepreneurship Practices in Heshuo County and Tumushuk City

Xinjiang holds a uniquely significant position within the broader work of the Party and the state, bearing on the grand tasks of national rejuvenation and building a strong nation. Vigorous development of the real economy and accelerated construction of a modern industrial system underpinned by the real economy are crucial for securing strategic initiative in China's future development and international competition. This section examines the overall context for women's innovation and entrepreneurship in Heshuo County and Tumushuk City to understand Xinjiang's broader innovation and entrepreneurship landscape.

I. Overall Innovation and Entrepreneurship Context in Xinjiang

During his review of work reports from the autonomous region and the Xinjiang Production and Construction Corps, General Secretary Xi Jinping emphasized: **"In building a new development paradigm, promoting high-quality development, and advancing Chinese modernization, Xinjiang faces new opportunities and must achieve new accomplishments. Leveraging its resource endowments, geographical advantages, and industrial foundations, Xinjiang should vigorously advance scientific and technological innovation, cultivate and strengthen distinctive industries with comparative advantages, actively develop emerging sectors, and accelerate the construction of a modern industrial system that reflects Xinjiang's unique characteristics and strengths. This will propel Xinjiang onto a path of high-quality development, enabling it to join the nation in comprehensively building a modern socialist country."**

1. Building a Modern Industrial System Reflecting Xinjiang's Characteristics and Advantages

A modern industrial system constitutes the material and technological foundation of a modern nation. Since the 18th CPC National Congress, Xinjiang has leveraged its unique resource endowments and geographical advantages to establish its current industrial base. Its industrial structure has continuously optimized, effectively supporting sustained economic growth and fostering a favorable environment of social stability and prosperity for its people. This has laid a solid foundation for achieving lasting stability and security. The real economy serves as the bedrock of a modern industrial system and is a crucial pillar for building strategic advantages for future development.

First, we must cultivate and strengthen distinctive and competitive industries. Given Xinjiang's resource endowments and industrial foundation, oil and gas, coal, minerals, grain, cotton, fruits, and vegetables represent our distinctive and competitive industries. Xinjiang's cotton output accounts for

over 90% of the country's total cotton output, holds the top position in oil and gas equivalent production, and leads the nation in industrial silicon and polysilicon output. These distinctive

These distinctive industries constitute a significant portion of Xinjiang's industrial structure, serving as the backbone of our region and the foundation of Xinjiang's modern industrial system. They directly impact the overall development of Xinjiang's modern industrial system. We must consistently prioritize the cultivation and expansion of these distinctive and competitive industries, fostering new momentum through transformation and upgrading.

For traditional industries, we must combine the promotion of key and critical technology R&D with the transformation of distinctive competitive industries. Leveraging the government's guiding role and regional characteristics, we should divide labor to build industrial clusters, using focal points to drive broader expansion of distinctive industries.

Second, we must actively develop emerging industries. Strategic emerging industries represent the direction of the new round of technological revolution and industrial transformation. They are key areas for cultivating new growth drivers and gaining future competitive advantages, serving as both pioneers and pillars. We must pursue progress while maintaining stability, continuously exerting efforts in planning development strategies, aggregating high-end factors, and optimizing the market environment. We should accelerate the development of new energy power generation, power transmission and transformation, and energy storage equipment manufacturing to build a complete new energy industry chain. We should vigorously develop silicon-based new materials industries and actively develop aluminum-based, copper-based, titanium-based, and carbon-based new materials industries. Through high-level clustering, we will better leverage agglomeration effects, strengthen division of labor and collaboration, enhance overall industrial efficiency, and create a powerful growth engine for the high-quality development of the real economy.

2. Vigorously Implement Scientific and Technological Innovation to Strengthen Foundational Support from Science, Technology, and Talent

Scientific and technological innovation serves as the strategic foundation for building a modern industrial system, and must provide the technological support and leadership required to establish a complete, advanced, and secure modern industrial system.

Currently, Xinjiang's role in driving economic development through technological innovation remains insufficient. According to the China Regional Science and Technology Innovation Evaluation Report 2022, Xinjiang's comprehensive science and technology innovation index score is below 50, ranking 30th nationally. The region's innovation level and capacity struggle to meet the demands of accelerating the achievement of high-level self-reliance in science and technology.

On this new journey, we must anchor our efforts to Xinjiang's strategic positioning, thoroughly implement the innovation-driven development strategy, and strengthen the foundational support of science and technology, talent, and other key elements. We must fully commit to building a regional science and technology innovation center for the Silk Road Economic Belt oriented toward Central Asia, using the construction of the "Two Zones" as a fulcrum to deepen the "Four-Party Cooperation." We must integrate technological innovation with Xinjiang's resource advantages, foundational conditions, and industrial upgrading. Focusing on the development of the "Eight Major Industrial Clusters," we will promote deep integration between innovation chains and industrial chains, strengthen basic research, and accelerate breakthroughs in key core technologies for priority industries such as cotton textiles, photovoltaic silicon-based, and aluminum-based sectors. Centering on distinctive and advantageous fields, we will advance the strategic deployment of scientific and technological capabilities, optimize technology transfer service systems, and enhance the conversion and industrialization of scientific and technological achievements. Innovation-driven development is fundamentally talent-driven. We must cultivate

and attract urgently needed high-level talent, strengthen comprehensive support including compensation packages, and establish a comprehensive talent service system covering all stages of the innovation process—from research to commercialization—to attract diverse scientific and technological professionals to achieve success in Xinjiang.

attract diverse scientific and technological talents to achieve success in Xinjiang.

3. Deepen Reforms and Improve Systems to Foster a Favorable Industrial Ecosystem

Advancing high-quality development requires continuously optimizing the allocation of production factors, driving transformations in quality, efficiency, and momentum, enhancing industrial foundational capabilities, and modernizing industrial chains and supply chains. This aims to achieve effective qualitative improvement and reasonable quantitative growth in the economy—all of which rely on a modern industrial system. Building such a system necessitates institutional design and policy innovation to foster a favorable industrial ecosystem.

II. Innovation and Entrepreneurship Context in Heshuo County

Heshuo County has implemented a series of measures to foster innovation and entrepreneurship, including advancing courtyard economies, providing intellectual support through digital empowerment, establishing point-based reward systems, supporting women's employment and entrepreneurship, and encouraging women's participation in beautiful countryside construction. These initiatives aim to revitalize the rural economy, upgrade social governance, and promote women's entrepreneurship and employment, offering comprehensive support and incentives for rural revitalization.

1. Innovative Development of the "Courtyard Economy"

The courtyard economy model integrates small arched greenhouses with courtyard spaces, transforming traditional agricultural practices to extend the agricultural value chain. This enables farmers to cultivate vegetables and other crops within their small courtyards, thereby increasing their income. Positioning rural construction as a key task of the rural revitalization strategy, the initiative vigorously develops vegetable processing while ensuring vegetable supply. This approach seeks to obtain green selenium-rich certification to advance rural revitalization. The development of courtyard economies boosts farmers' incomes, injecting new vitality into the rural market economy and the pursuit of prosperity.

In summary, Suhart Township's courtyard economy model represents an innovative approach to rural revitalization. By enhancing rural industries, improving social governance, and boosting farmer incomes, it accelerates the progress of rural revitalization.

2. Full Participation Ignites Collaborative Governance

The village Party branch and village committee of Suhart Village, guided by the principle of benefiting the people and responding to their needs, have extensively implemented the "points system" through opinion collection, publicity campaigns, and Q&A sessions. This effort aims to broaden the system's influence and coverage. Simultaneously, the village has focused on the key point of "full participation," using the mobilization of villagers' enthusiasm as a breakthrough. It has established "point-based file folders" for each household and adopted a "5+X" model. This model incorporates five key areas—village Party organization development, grassroots governance, collective economy, living environment, and rural revitalization—into the point system.

巾帼石榴花
乡村“她”力量

Quantified scoring criteria are established based on the principle of "assessing areas of weakness," with dynamic scoring items tailored to local conditions.

X, constructing a practical, precise, and dynamically adjustable points system.

3. Digital Empowerment Provides Intellectual Support

To address challenges like large-scale scoring, diverse tasks, and real-time evaluation, Suhart Village pioneered a pilot by developing the "Village Affairs Points System Management" mini-program. Through its three core functions—online scoring, review, and public display—the platform digitizes points entry, approval, and archival management. Regular analysis of points data through the mini-program generates distribution maps of villager participation in governance matters. This enables **the village Party branch and village committee** to intuitively understand governance effectiveness and villager engagement, establishing a smart governance framework that provides intellectual support for village development. Simultaneously, real-time public disclosure and ranking of points results encourage villagers to "hold up a mirror to each other," fostering a vibrant atmosphere of mutual learning and friendly competition.

4. Points Redemption Strengthens Governance Tools

Using quantitative point-based assessments as a lever, the system actively explores positive incentive mechanisms. For spiritual incentives, point rankings serve as key references for selecting honors such as Outstanding Communist Party Members, Model Villagers, and Safe Families. For material rewards, the village committee allocates a dedicated points redemption fund from collective economic revenues. A points redemption supermarket allows villagers to exchange accumulated points for daily necessities, using a shopping-like experience to boost their enthusiasm and initiative in participating in village affairs. Regarding policy support, villagers with top point rankings receive priority access to various support policies and credit loans. Digital management through a points-based mini-program has significantly enhanced the convenience of the points system, creating a "competition arena" and **testing ground** for rural Party members and residents to showcase contributions and services.

The Women's Federation of Heshuo County effectively leverages its role in "connecting" to actively promote women's contributions to rural revitalization. It has played a positive role in advancing the creation of "Beautiful Courtyards" and encouraging women's innovation and entrepreneurship.

5. Strengthening Ideological Education to Transform Women's Entrepreneurship and Employment Mindset

First, we persist in guiding women with Party theory. Utilizing platforms such as flag-raising ceremonies, evening community schools, the Pomegranate Flower Lecture Series, courtyard talks, and informal gatherings, we continuously deepen **the "Cultural Enrichment of Xinjiang in Every Home" initiative ()**. ~~Through~~ **Through** **the Women's Lecture Series**. Through **"lecture+" "arts+"** and other popular formats, we extensively disseminate the spirit of the 20th CPC National Congress, promote the latest employment policies, and highlight the significance of women's employment, entrepreneurship, and accelerated development. This encourages women to overcome negative mindsets and further ignites their enthusiasm for entrepreneurship and employment. Second, we persist in encouraging women through exemplary role models. Leveraging International Women's Day **(March 8th)**, we publicize inspiring stories of women entrepreneurs to bolster confidence among women in business and employment, motivating more females to join the entrepreneurial wave. In the first quarter, county, township, and village-level "Pomegranate Blossom" women's lecture teams conducted 138 sessions, reaching 1,450 participants.

teams to deliver 138 sessions reaching 1,450 participants.

6. Promoting technological innovation to actively broaden women's employment pathways

First, **advancing** the **"Pomegranate Blossom"** Women's Science and Technology Innovation Initiative. Coordinating with relevant county departments, we conducted a survey of female science and technology professionals in agriculture, forestry, animal husbandry, education, health, and medical sectors, establishing an initial talent database for female scientists. We launched the **"Pomegranate Blossom"** Science Popularization Garden on the **"Heshuo Women's Voices"** WeChat public account platform. Second, we established demonstration bases for women's entrepreneurship and employment. We continuously identified eligible economic entities across various sectors, actively nurtured and recognized exemplary women entrepreneurs and wealth-generating experts, leveraging their influence to inspire more women to pursue employment, entrepreneurship, and increased income. Currently, there are three county-level **"Pomegranate Blossom"** demonstration bases for entrepreneurship and employment.

Three applications were submitted for provincial-level **"Pomegranate Flower"** entrepreneurship and employment demonstration bases. Third, recruitment and training initiatives for women professionals were conducted. Regular **"online + offline"** recruitment activities were held. During International Women's Day, a dedicated job fair for women professionals was organized, attracting 24 enterprises and institutions offering 48 positions across more than 20 job categories. A women's culinary skills competition was held, attracting 46 participants, striving to provide more platforms for women's entrepreneurship and employment. In collaboration with the county technical school, 10 training sessions in domestic service skills—including infant care, intermediate-level pastry making, intermediate-level cooking, and beauty services—were conducted, serving 349 participants and laying a foundation for women's employment and entrepreneurship.

7. Encouraging Employment and Entrepreneurship to Advance Women's Contribution to Rural Revitalization

First, implement the **"Pomegranate Blossom"** Embroidery Artisan Training Program. Encourage women to master specialized skills. Leverage the advantages of the **"Little Hands Hold Big Hands: Whole Family Learning"** initiative to actively secure resources from various parties. Utilize the agricultural off-season to organize women in vocational training programs such as intricate embroidery and traditional handicrafts, enhancing rural women's capabilities and continuously expanding their entrepreneurial pathways to prosperity. Second, strengthen education in the national common language and script for women. Actively promote the **"Little Hands Hold Big Hands: Whole Family Learning"** initiative for family-based national language education. Activities include reading classics together, practicing calligraphy, singing patriotic songs, watching revolutionary films, and playing parent-child games. This fosters a positive atmosphere for whole-family language learning, facilitating smoother daily life and broader employment opportunities. Third, leverage women's role as a key force in building beautiful villages. Actively mobilize and encourage rural women to participate in the **"Beautiful Courtyard"** initiative. Organize women and families of all ethnic groups to regularly conduct environmental sanitation campaigns, striving to create a harmonious, beautiful, and civilized living environment. In the first quarter, 4,500 women were mobilized to participate in environmental sanitation activities.

乡村“她”力量

III. Innovation and Entrepreneurship Context in Tumushuk City

In recent years, Tumushuk City's human resources and social security system has implemented multiple measures to actively support entrepreneurship and employment. It provides various loans, subsidies, entrepreneurial guidance, training, and policy outreach to different groups, helping enterprises overcome difficulties, reduce costs, and increase efficiency. Special attention has been given to youth entrepreneurship and women's innovation and entrepreneurship policies. Through initiatives such as establishing "Ten Small Shops," developing "Home Workshops," and conducting e-commerce training, entrepreneurial vitality has been stimulated, employment opportunities enhanced, and women and youth empowered to pursue self-employment. These efforts have elevated overall employment levels and made positive contributions to local economic development. This series of measures has injected new momentum into Tumushuk City's social development, making it easier for entrepreneurs to realize their dreams while providing more opportunities for women and youth. It has offered solid support for local economic growth and social progress.

1. Relaxing Loan Conditions and Increasing Loan Amounts

Since 2023, the Tumushuk City Human Resources and Social Security system has actively implemented entrepreneurship guarantee loans and interest subsidy policies.

For micro and small enterprises meeting the application criteria for entrepreneurial guarantee loans, the maximum loan amount has been increased to 3 million yuan.

For eligible self-employed individuals and sole proprietors, the maximum loan amount has been increased to 200,000 yuan, with a 40% interest subsidy provided by the government as stipulated. From January to July, Tumushuk City disbursed 830,000 yuan in guaranteed loans with interest subsidies, supporting 7 sole proprietors in starting businesses; 6 youth entrepreneurship income-generating projects were identified, securing 600,000 yuan in funding for the Youth Entrepreneurship Income-Generating Action Project; and efforts were made to secure 600,000 yuan in funding for the Xinjiang Huimin Animal Husbandry Farmers' Professional Cooperative of the 41st Brigade.

600,000 yuan in project funds for youth entrepreneurship and income generation initiatives; secured support for the Xinjiang Huimin Animal Husbandry Farmers' Professional Cooperative (41st Regiment),

Tumushuk City Gulilan Tailor Shop in Corps 53, Tumushuk City Nurguli Wellness Center in Gash General Farm, and Tumushuk City Baiqing Wellness Club Women's Home-Based Entrepreneurship Project, and applied for 140,000 yuan in Corps Women's Home-Based Entrepreneurship Support Funds

funding of 140,000 yuan; these initiatives have generated employment opportunities for over 200 individuals.

2. Issuing various subsidies to support youth entrepreneurship

Tumushuk City issued flexible employment social insurance subsidies to college graduates in their graduation year or those unemployed for up to two years after graduation

unemployed college graduates with flexible employment social insurance subsidies, provided start-up guarantee loans and interest subsidies of up to 200,000 yuan to college graduates, distributed employment assistance funds of up to 5,000 yuan to unemployed college graduates operating micro-enterprises such as small shops, restaurants, supermarkets, workshops, and eateries, and granted

unemployed graduates within the autonomous region who have obtained a business license (or other statutory registration procedures) and maintained normal operations for over three months.

3. Provide entrepreneurial guidance and conduct entrepreneurship training

Tumushuk City has selected entrepreneurial mentors from diverse industries with extensive theoretical and practical experience in entrepreneurship. These mentors provide guidance services to entrepreneurs in areas such as project selection, business launch support, market promotion, and operational management. The city has conducted training programs for 265 individuals. They provide guidance on project selection, business launch, market promotion, and operational management. The city conducted training programs for graduate e-commerce professionals, modern apprenticeships, and entrepreneurship for 265 individuals, disbursing training subsidies totaling 303,800 yuan.

4. Promoting Policies to Assist Enterprises in Troubleshooting, Cost Reduction, and Efficiency Enhancement

Tumushuk City closely monitors urgent development challenges faced by enterprises, implementing concrete measures to alleviate difficulties, reduce costs, and enhance efficiency. The city accelerated the implementation of employment support projects under the Xinjiang aid program and the execution of employment subsidy policies. It provided comprehensive explanations on policy provisions, eligibility criteria, and required documentation for job retention subsidies, social insurance subsidies, public employment services, skills enhancement training, and innovation/entrepreneurship support. It addressed enterprises' questions to help them accurately grasp policies and boost business confidence.

Based on the actual conditions of the division and city, the Tumushuk Women's Federation has continuously carried out the Women's Innovation and Entrepreneurship Initiative and the Women's Rural Revitalization Initiative. Over the past five years, it has secured a total of 2.52 million yuan in various support funds, supported 47 women's employment and entrepreneurship projects, and established women-centered bases such as Tangjin Textile and Shengli Garments. A large number of women entrepreneurs, such as Gulistan and Chen Qinqin, have emerged.

5. Building "Ten Small Shops"

Leveraging the "Women's Innovation and Entrepreneurship Initiative," the Tumushuk Women's Federation has established an entrepreneurship and employment platform for ethnic minority women, developing "women-branded" industries tailored to local conditions. During outreach visits, the Federation discovered many women with entrepreneurial aspirations. Following the centralized relocation of villages, each village has established "Ten Small Shops," which are particularly suitable for women's employment and entrepreneurship. Consequently, the Tumushuk City Women's Federation applied for the "Women's Prosperity Ten Small Shops" project, with 18 women-led initiatives successfully approved. These women opened small supermarkets, naan bakeries, and more. The Women's Federation also utilized home-based entrepreneurship funds to help women establish farming and breeding cooperatives, transforming many into new female farmers.

6. Developing "Home Workshops"

"Home workshops" represent an industry model introduced by a local sock manufacturing enterprise—the "Headquarters + Home Workshop + Farmers" industrial development model tailored to local conditions, aiming to help local residents—especially women—gain employment and increase income nearby. Currently, "Home Workshops" operate in two formats. One involves cooperative arrangements organized by brigade units, selecting idle

"家庭工坊" , enabling nearby residents to work locally. The other involves setting up workshops within residents' homes, where enterprises provide equipment and family members manage operations independently, working whenever time permits. This production model not only meets corporate labor demands but also drives employment through industrial development, helping residents increase their income and achieve prosperity.

Statistics show that "home workshops" have now spread across 10 regiments and 25 companies in Tumushuke City, Third Corps, covering 405 households. They generate an average annual income increase of approximately 30,000 yuan per person, becoming a new pathway for residents to create and increase income.

7. Conducting E-commerce Training

In recent years, the Women's Federation of the Division and City has vigorously promoted the **“Women's Entrepreneurship Initiative”** to enhance women's awareness of entrepreneurial income generation. Focusing on practical skills like e-commerce, it offers diverse training programs. These sessions introduce participants to China's current online entrepreneurship landscape and provide hands-on instruction in video software filming and editing techniques. This helps trainees gain a comprehensive understanding of e-commerce platform development and operational processes. This initiative fosters a new model of short-video content marketing, thereby elevating the capacity to serve, empower, and guide women in the e-commerce era. It better equips women to embrace the **“Internet+”** trend, scientifically utilize online platforms, expand entrepreneurial avenues, develop e-commerce economies, stimulate innovation and entrepreneurship under the new **“Internet+”** landscape, and propel women's entrepreneurship and innovation to new heights.

Section III: Findings from Innovation and Entrepreneurship Practices in Heshuo County and Hotan City

Women are an indispensable force in rural revitalization, and women's innovation and entrepreneurship have become a crucial means of supporting this revitalization. During our investigation of practices in Heshuo County and Tumushuk City, we summarized the main characteristics of local women's innovation and entrepreneurship from four aspects: knowledge, emotion, intention, and action.

I. Knowledge: Insufficient Understanding of "Rural Revitalization"

Most women in Heshuo County and Tumushuk City possess only superficial knowledge of the rural revitalization strategy, with limited understanding of its specific details.In the questionnaire survey, 97.73% of women indicated awareness of the "rural revitalization strategy," but only 34.09% stated they knew and understood its specific details. The remaining 64% of rural women were aware of the concept but unclear about its specifics. This indicates that while the rural revitalization strategy is widely recognized among rural women, there remains room for improvement in popularizing and educating them about its concrete content.

Figure 1-1 Level of Understanding Regarding Rural Revitalization

II. Sentiment: Overall Recognition of the Value of Innovation and Entrepreneurship

1. Stronger Recognition of Rural Women's Crucial Role in Rural Revitalization

Rural women in Heshuo County and Hotan Prefecture largely recognize themselves as a vital force in the rural revitalization strategy. In the questionnaire survey, 69.77% of respondents believed rural women play a "pivotal role" in rural revitalization, indicating a high level of recognition among rural women regarding their significant contribution to this endeavor.

2. High satisfaction with innovation and entrepreneurship outcomes

Women who participated in innovation and entrepreneurship training expressed high satisfaction with the outcomes. Over 80% of women reported being relatively satisfied or quite satisfied with the results generated by their innovation and entrepreneurship efforts. See Figure 2-2 below. Specific areas of satisfaction included rich training content and a pleasant, comfortable training environment. During interviews, Ms. H mentioned, "Learning cooking allows women to prepare beautiful meals for their families, which is a wonderful way to contribute." She believes the training content aligns closely with women's practical needs. Ms. T also noted that the instructors were dedicated and responsible, fostering a positive learning atmosphere.

Figure 2-2 Satisfaction with Innovation and Entrepreneurship Outcomes

巾帼石榴花
乡村“她”力量

3. High Recognition of Education/Training's Role in Innovation and Entrepreneurship, but Room for Improvement

Women in Heshuo County and Tumushuk City demonstrate high recognition of the role of education/training in innovation and entrepreneurship, though there is still room for improvement. In the questionnaire, when asked "Do you believe education or training has played a role in your innovation and entrepreneurship?", 65.38% of women responded "significantly," followed by 30.77% who answered "moderately." This indicates that while rural women in Heshuo County generally recognize the role of education and training in innovation and entrepreneurship, a significant portion remain unaware of its importance.

III. Intent: Strong Overall Willingness to Participate in Innovation and Entrepreneurship

1. Multi-faceted Support Encourages Rural Women to Explore Innovation and Entrepreneurship

In the questionnaire, regarding the question "How did you develop the idea for innovation and entrepreneurship?", the selection rates for "relevant publicity," "policy support," and "personal ideas" all reached 70%. Additionally, the selection rate for "successful cases around them" also reached 60%.

2. Strong Motivation to Participate in Innovation Training

The vast majority of women in Heshuo County and Tumushuk City possess a strong desire for self-improvement and wish to participate in innovation and entrepreneurship training. Although only 34% of women in the questionnaire survey considered themselves highly knowledgeable about the rural revitalization strategy, in innovation and entrepreneurship practices, 80% of women cited "gaining knowledge and enhancing skills to secure more employment opportunities" as their reason for participating in training. Furthermore, 61% of women expressed a desire to enrich their lives and increase their self-worth. See Table 2-1 below.

Table 3-2 Reasons for Choosing to Participate in Training

选项	小计	选择率
获得知识，提升自身技能，从而获得更多就业机会	60	75%
充实生活，提高自身价值	56	70%
村委会强制要求	28	35%
培养兴趣	24	30%
参加活动可以获得补贴	12	15%
拓展人际关系	12	15%
其他	12	15%
我不了解	4	5%

3. Traditional mindsets, personal perceptions, and educational limitations significantly hinder rural women's participation in rural revitalization. The primary barriers preventing rural women in Heshuo County and Hotan City from engaging in rural revitalization include constraints imposed by traditional thinking, limitations in personal awareness, and restricted educational attainment. , limited personal cognition, and restricted educational attainment. In response to the question "What factors do you believe hinder rural women's participation in rural revitalization?", three factors were selected most frequently—traditional "men work outside the home, women manage the household" ideology, women's insufficient recognition of their own status and value, and low cultural literacy among rural women—each exceeding 60%. Additionally, the factor "society's insufficient regard for women" was selected by 55.81%.

IV. Action: Strengthening Innovation and Entrepreneurship Initiatives

1. Low Participation in Innovation and Entrepreneurship

Few rural women in Heshuo County have attempted innovation and entrepreneurship, with their ventures primarily concentrated in individual entrepreneurship or industrial cooperatives, as shown in Tables 4-1 and 4-2. In the questionnaire survey, only 22.73% of women reported having experience in innovation and entrepreneurship, a relatively low proportion. Among these, individual innovation and entrepreneurship accounted for 50%, while rural industrial cooperatives accounted for 40%.

Table 4-1: Experience in Innovation and Entrepreneurship

巾帼石榴花
乡村“她”力量

Table 4-2 Forms of Innovation and Entrepreneurship

2. Limited Participation in Entrepreneurship Training in Terms of Volume and Frequency

Rural women in Heshuo County and Hotan City engage in fewer daily activities related to entrepreneurship training. When asked, "Do you often feel you have nothing to do in your daily life?" 40% of women occasionally felt this way, while 68% cited watching TV or using mobile phones as their primary daily activities. Only 30% of women expressed a desire to participate in various training programs. However, further investigation among respondents who had participated in innovation and entrepreneurship education training revealed that over 70% of women indicated they had never participated in training or attended only 1-2 sessions per year; only 6% attended seven or more training sessions annually.

3. Diverse Training Content and Formats

Through questionnaires and interviews with villagers, **Heshuo County and Tumushuk City have implemented diverse training activities for women with diverse formats.** See Tables 4-3 and 4-4 below. These training activities were organized by village committees and mobilized villagers to participate. In terms of content, the most prominent topics include planting and breeding techniques; agricultural product processing skills such as corn milling; traditional handicrafts like embroidery; and commodity management skills. Training formats encompass attending lectures, collectively watching training videos online, field trips for learning, interactive hands-on practice, and classroom instruction. Instructors include departmental leaders, technical college teachers, and industry experts.

Table 4-3 Types of Innovation Training Content Attended

Table 4-4 Types of Innovation Training Formats Participated In

巾帼石榴花
乡村“她”力量

4. Relatively Assured Training Outcomes

Innovation and entrepreneurship training ensures outcomes through completion certificates and actual business establishment. Most village training activities are state-funded, taught by instructors from Korla Prefecture and technical schools to guarantee quality and professionalism, enabling women to participate free of charge. Upon completion, the autonomous region administers formal examinations to assess learning outcomes, with qualified participants receiving certificates. 26% of women reported that they were able to obtain completion certificates most of the time. See Figure 2-1 below. During interviews, three villagers mentioned successfully applying their acquired knowledge to open catering businesses. Ms. D also noted, “After completing hairdressing training, participants provide her with hairdressing equipment and regularly recommend her for further training at _____,” indicating that skills training is not a one-time event—relevant department heads provide ongoing follow-up. In the future, the village committee plans to organize additional training activities based on villagers' interests.

Figure 4-4: Completion Certificate Distribution

5. Training Facilities Require Improvement; Related Promotion Needs Enhancement

Training facilities in Heshuo County and Hotan City require improvement, and related publicity efforts need strengthening. Regarding areas needing enhancement, 61.54% of women surveyed indicated that training content and facilities were inadequate and required improvement; 46.15% felt the training content was outdated or the instructors lacked competence, while 38.46% and 23.08% respectively cited hardware issues such as outdated facilities and poor environments. Among women who did not participate in training, 43.18% stated they lacked time and energy due to heavy workloads, while 40.91% indicated they were sometimes unaware of relevant information.

6. Innovation and Entrepreneurship Promotion Platforms and Government Policy Support

In the questionnaire survey, regarding "whether the government provides any relevant support for innovation and entrepreneurship," the top responses were: relevant policy support, relevant training/education, relevant publicity platforms, and relevant guidance/consultation platforms. Regarding "what kind of support you have received for innovation and entrepreneurship," the top responses were: relevant publicity platforms, relevant policy support, relevant guidance/consultation platforms, and relevant training/education.

7. Funding gaps and technical/knowledge deficiencies require improvement; policy implementation

needs refinement. In the survey, when asked "Why are you not interested in innovation and entrepreneurship?", the top responses were lack of technical/knowledge, lack of funding, unclear entrepreneurial goals, **and absence of policy guidance.** Regarding "Challenges encountered during innovation and entrepreneurship", the top responses were lack of funding, unclear entrepreneurial goals, and absence of policy guidance.

Lack of technology/knowledge, lack of funding, unclear entrepreneurial content, and absence of relevant policy guidance. Similarly, when asked about "Challenges encountered during innovation and entrepreneurship," the top responses were lack of funding, lack of guidance/consultation, lack of relevant policies, and unclear entrepreneurial content.

巾帼石榴花
乡村“她”力量

consultation platforms, lack of technical/knowledge resources, and absence of relevant policy guidance.

Section IV: Current Status of Pairing Assistance Between Heshuo County and Tumushuk City

This section primarily introduces the assistance measures implemented by Hebei Province and Guangdong Province in areas such as industry, education, talent, and healthcare for these two regions. It explores how they support the development of cities in Xinjiang and examines their assistance measures for women's innovation and entrepreneurship.

I. Current Status of Hebei Province's Pairing Assistance to Heshuo County

Hebei Province actively leverages its strengths in advanced management expertise, technology, capital, and talent to complement Heshuo County's abundant natural and cultural resources, enabling both regions to soar together in a new wave of development. With strong industrial complementarity between Hebei and Xinjiang, deepening cooperation and advancing hand-in-hand will open up broad prospects. Hebei remains steadfast in its fundamental commitment to devising practical measures, attracting projects, and delivering tangible results, striving to forge ~~Hebei~~ new-era targeted assistance to Xinjiang. **1.**

Industrial Assistance to Xinjiang — Devising Practical Measures to Build the Demonstration Zone's "Main Platform"

The Langfang Urban and Rural Planning and Design Institute in Hebei assisted Heshuo County in developing a master plan for its ecological industrial park and signed a framework agreement for joint construction. Numerous enterprises have expressed intent to sign agreements. In 2015, with coordination and assistance from the provincial command center for Xinjiang aid, the park was upgraded to focus on developing key industries including energy and chemical engineering, equipment manufacturing, textiles and apparel, modern logistics, eco-friendly building materials, and biopharmaceuticals. It has become a crucial driver for Xinjiang's efforts to build a high-quality economic development demonstration zone. **2. Commercial Aid to Xinjiang—Delivering Tangible Results to Sound the Strongest Call for Investment**

Hebei Province actively coordinates industrial cooperation and exchange activities between its prefecture-level cities, relevant departments, and enterprises with Heshuo County in Xinjiang. These collaborations span but are not limited to the textile industry, coal industry, specialty agriculture, and emerging industries. By **"grafting"** these industries onto Xinjiang, achieving complementary advantages and deep integration, the initiative has yielded fruitful results.

While Xinjiang produces high-quality, pollution-free fruits, their remote location often leads to sales challenges for many agricultural products. Hebei has dedicated efforts to building distinctive agricultural brands like "Aid Xinjiang's Bountiful Fruits" and "Zhangjiakou's Xinjiang Harvest," establishing a Hebei sales base for Xinjiang's specialty agricultural products. Through the Xinjiang Agricultural Product Sales Project under Hebei's aid initiative, these premium fruits now reach households across our province.

3. Talent Assistance to Xinjiang—Improving Livelihoods to Achieve Comprehensive Moderate Prosperity Together

Wu Yinzong, a member of Hebei's sixth batch of aid cadres from the Zhangjiakou Seed Management Station, arrived in Heshuo County to serve as an agricultural technology extension researcher at the county's Agriculture Bureau. Focusing on local soil conditions and agricultural structures, he traversed rugged dirt roads, braved swirling sandstorms, and subsisted on packed rations while visiting village by village and department by department.

and even tasted the soil to pinpoint the root causes of poverty. Leveraging his expertise, he decided to introduce the "Zhangzaigu" variety—a strain resistant to infertile soils, drought, and capable of high yields—for local trials. Under his promotion, the village achieved poverty alleviation that year. Subsequently, by leasing additional land, the cultivation area expanded to over 7,000 mu (approximately 46

to trial the locally adapted '**Zhangzao Millet**'—a variety resistant to poor soil and drought while yielding high harvests. Under his promotion, the village achieved poverty alleviation that same year. Subsequently, by leasing additional land, the cultivation area expanded to over 7,000 mu (approximately 467 acres), pioneering large-scale millet cultivation in Xinjiang.

with a gross income of 1,700 yuan per mu, becoming a new pathway for the people to escape poverty and achieve prosperity.

4. Education Aid to Xinjiang—Education Transmits Dreams to Lift Students' Aspirations

Gulimire Mitiwula from Hejing County, Bayingolin Mongol and Tibetan Autonomous Prefecture, grew up in an urban low-income family. In 2016, she was admitted to Henan University of Science and Technology but faced financial hardship in covering tuition and living expenses. The annual 6,000 yuan subsidy from Hebei's Xinjiang aid funds came as a timely **rain**, bringing her hope and covering her four years of study. Over the years, Hebei Province has implemented 39 projects (categories) including school building construction for kindergartens, primary schools, junior high schools, and vocational schools in counties, cities, and collective farms and financial aid for financially struggling Xinjiang students studying outside the region. It has concentrated the strengths of six universities, including Hebei University, to provide targeted support for discipline development at Xinjiang University of Science and Technology and the Higher Vocational College of Xinjiang Medical University. It has also supported projects such as the construction of Yan Zhao Middle School in Korla City and the new campus of Bayingolin Prefecture Health School, as well as the construction of 31 rural primary schools and kindergartens. **II. Current Status of Guangdong Province's Targeted Aid to Tumushuk City**

Guided by the principle of strengthening the sense of community for the Chinese nation, the Guangdong Provincial Aid Team stationed in the Third Division, Tumushuk City, prioritizes uniting hearts and minds as the fundamental goal of its aid work. Focusing on key tasks such as medical, industrial, and intellectual support, the team has cumulatively invested 2.372 billion yuan in aid funds to support economic and social development initiatives in the Third Division and Tumushuk City.

1. Medical Aid to Xinjiang—Enhancing the "**Blood-Building**" Capabilities of Recipient Hospitals

For a long time, shortages of personnel and technology have constrained the development of medical services in southern Xinjiang. Over the past three years, Guangdong Province has cumulatively invested 150 million yuan in aid funds to help the Third Division General Hospital establish five new departments, including Oncology and Gastroenterology, and elevated five existing departments—including pediatrics and obstetrics/gynecology—to key departments. Concurrently, 67 brigade-level and company-level health stations were renovated and constructing 32 standardized brigade health stations.

Building on this foundation, Guangdong Province has successively dispatched 81 medical personnel to support the Third Division General Hospital and various brigade hospitals in Xinjiang, addressing the shortage of medical professionals in the division's healthcare institutions. Furthermore, leveraging the strengths of "**group-based**" assistance, the program employs a "**mentoring and guidance**" approach to impart advanced medical concepts and clinical expertise. To date, these doctors have trained over 3,300 medical personnel from the Third Division, significantly enhancing the recipient hospitals' capacity for **self-sustaining development**.

巾帼石榴花 乡村“她”力量

2. Industrial Aid to Xinjiang—Sustained Enhancement of Endogenous Momentum

Industrial aid serves as an effective pathway to channel development benefits to improve people's livelihoods and foster unity. Since 2020, the Guangdong Provincial Aid Team stationed in Tumushuk City, Third Division, has actively assisted the recipient region in pioneering a location-based investment promotion model within the Corps. This initiative has strengthened industrial alignment between Guangdong and Xinjiang, facilitating the introduction of 19 industrial aid projects from Guangdong with a cumulative investment of 11.2 billion yuan, achieving an output value of 13.5 billion yuan.

Building on this foundation, the Guangdong Provincial Aid Team in Tumushuk City, Third Division has intensified investment promotion efforts for mid-to-downstream projects such as printing and dyeing, weaving, sock manufacturing and garment production. This has gradually refined industrial chains, fostered industrial clusters and supporting facilities, and significantly bolstered financial support for the textile industry in the Third Division. Crucially, it has created numerous job opportunities and textile skills training programs for local rural women in Xinjiang.

3. Education Aid to Xinjiang—Transmitting Strength, Cultivating Hope

Education stands as the cornerstone of Xinjiang aid initiatives. Grounded in the educational realities of the Third Division and Tumushuk City, the Guangdong Provincial Aid Team has united in purpose and demonstrated practical commitment to addressing critical issues like enhancing teaching quality and strengthening the teaching workforce. This "group-based" education approach, tailored to Tumushuk City's educational realities, the Guangdong Provincial Aid Team has united in dedication and practical responsibility to address key issues like improving teaching quality and strengthening the teacher workforce. Their "group-based" educational aid approach has yielded solid results.

Since 2020, Guangdong has organized 122 aid teachers to form mentor-mentee partnerships with Third Corps educators through **one-on-one** and **group** approaches. These mentors guide local teachers in conducting educational research projects, thereby enhancing their teaching capabilities. Simultaneously, an **"Internet+Teaching Research"** service platform was established to host the **"Guangdong-Xinjiang Online Teaching Research: Mutual Assistance for Shared Growth"** series of virtual teaching activities. This initiative brought high-quality educational resources from Guangdong directly to supported schools in the Third Corps and Tumushuk City.

Over the past three years, Guangdong's aid cadres and local Xinjiang residents have forged deep bonds, embedding the spirit of aid into the Third Corps' land. Livelihood and industrial aid projects have been delivered one by one, while cultural enrichment initiatives have advanced steadily, allowing the blossoms of ethnic interaction, exchange, and integration to flourish brilliantly.

Section 5: Current Status of Yangtze River Delta Region's Pairing Assistance to Xinjiang

Since the 18th CPC National Congress, the Yangtze River Delta region has earnestly implemented the decisions and plans of the Party Central Committee, adhering to comprehensive, targeted, and long-term assistance to Xinjiang. This section explores the assistance measures adopted by cities in the Yangtze River Delta region in four areas—industry, women's federations, culture and tourism, and education—to provide new ideas and approaches for other cities. **I. Industrial Assistance to Xinjiang: Benefiting People's Livelihoods**

Since 2020, the 10th batch of aid teams from Lishui City, Zhejiang Province, has focused on three key areas: industrial employment, investment promotion, and the eastward distribution of Xinjiang fruits. By leveraging the **"blood-building"** function of industrial aid, the teams have vigorously encouraged and supported innovation and entrepreneurship in Xinjiang.

and entrepreneurship. This includes accelerating the implementation of projects like "Ten Cities, Hundred Stores" and "Hundred Villages, Thousand Factories," which have created nearly 10,000 local jobs and providing substantial employment opportunities for rural populations. Efforts also included assisting in the creation of Aksu Prefecture's first county-level regional public brand for agricultural products, "Duhu Premium," and establishing the Xinhe E-commerce Service Center. Online and offline promotion has enabled Xinhe's specialty agricultural products to "fly into" the Yangtze River Delta market, providing market opportunities for entrepreneurship and innovation.

II. Women's Federation Aid to Xinjiang: Mutual Support and Assistance

The "2023 Work Plan for Pairing Assistance to Xinjiang" issued by the All-China Women's Federation further defined the goals and clarified the tasks for the Jiangsu Women's Federation this year. In March 2023, the "Strategic Cooperation Framework Agreement for Jiangsu Women's Federation's Pairing Assistance to Kizilsu Women's Federation" was formally signed. This marks the Jiangsu Women's Federation's earnest implementation of the requirements set forth by the central government, the provincial party committee, and the All-China Women's Federation. It signifies strengthened communication and close cooperation with women's federations in paired prefectures and cities in Xinjiang, yielding fruitful results. This further enhances collaborative development among women's federations, forming a women's work exchange mechanism characterized by resource sharing, information exchange, and mutual assistance. It has further expanded channels for women's exchanges and promoted the empowerment of rural women in Xinjiang.

III. Cultural Tourism Enriches Xinjiang, Nurturing Silently

The signing of the Strategic Agreement on Tourism Assistance Cooperation Alliance in the Yangtze River Delta Region signifies the formal establishment of the alliance. Aid agencies from Shanghai, Jiangsu, Zhejiang, and Anhui provinces leverage the integrated tourism development platform of the Yangtze River Delta region, adhering to the principles of "strengthening collaboration, sharing resources, complementing strengths, and mutual benefit" to build a tourism assistance cooperation mechanism.

To "tell China's story well," restore and recreate the history of Kashgar—a place where "multiple religious beliefs coexist, diverse cultures converge, and multiple ethnic groups integrate"—and to promote and advance the development of the cultural tourism industry in the Kashgar region, The Shanghai Aid to Xinjiang Front Command Headquarters adopted an intellectual aid approach (as the project site is Kashgar City, which receives counterpart support from Shenzhen, it is designated as a Shenzhen aid project). It invited and supported the Shanghai Landscape Architecture Design Institute to undertake the project's planning, design, and engineering general contracting through competitive bidding as a market entity.

IV. Educational Aid to Xinjiang: Cultivating Virtue and Nurturing Talent

With the strong support of the tenth batch of Shanghai-Xinjiang aid cadres and professionals, Kashgar No. 6 Middle School (Shanghai Normal University Affiliated Kashgar Middle School) has seen its educational quality steadily improve year after year, ranking among the top schools in the region. Backed by the full support of Shanghai Normal University and other higher education institutions

巾帼石榴花
乡村“她”力量

Kashgar No. 6 Middle School is developing distinctive features in multiple areas, including training for core teachers, instruction in the national common language, and new curriculum development.

Shanghai's Xinjiang assistance adopts a "1+4+N" large-group model—namely, "one core school, four county-level groups, and regional outreach"—to extend educational expertise and achievements to Shanghai's four counterpart counties and the entire region. With Kashgar No. 6 Middle School as the core, Shanghai's aid program has established county-level "education groups" in Zepu, Shache, Yecheng and Bachu counties. These groups designate benchmark schools and member schools to achieve large-group assistance. Shanghai teachers are concentrated in 2-3 core primary and secondary schools in each paired county, fully leveraging the advantages of "small-group" assistance to build local educational hubs.

Chapter 3: Women's Innovation and Entrepreneurship Practice Cases in Heshuo County and Hotan City

Section 1: Current Status of Women's Entrepreneurship in Heshuo County and Tumushuk City

The Xinjiang regional government has consistently prioritized promoting women's entrepreneurship. It has introduced a series of supportive measures and policies, including but not limited to providing loan support, tax and fee reductions, entrepreneurship training, and employment assistance. Secondly, cities providing counterpart assistance to Xinjiang have focused their efforts on industries, employment, poverty alleviation, people's livelihoods, and education across the region. They adhere to a combination of "blood transfusion" and "blood generation," hardware and software, emphasizing innovative assistance models and continuously enriching the content of assistance. These policies aim to provide a favorable environment and conditions for women's entrepreneurship, enabling more women to create new chapters in their lives through their own hard work.

I. Overview of Women's Entrepreneurship in Heshuo County and Tumushuk City

With social development and rising educational levels, an increasing number of women are exploring entrepreneurial opportunities, developing entrepreneurial awareness and capabilities. More women are proactively pursuing self-employment, seeking suitable business ventures and opportunities.

Women's entrepreneurship in the Tahachi Town area of Heshuo County, Xinjiang, spans diverse sectors including agriculture, handicrafts, and services. This diversification indicates numerous untapped areas in social life awaiting their innovation and represents opportunities for women to realize entrepreneurial dreams across various fields.

Numerous success stories of women entrepreneurs have emerged in Heshuo County and Tumushuk City, Xinjiang. Examples include the "restless" Li Qinghua, the "Tofu Beauty" Zaimuzaigu Abudulim, the "master seamstress" Li Guirong, the "busy" Aunt Ma, and the "Spicy Beauty" Aziguli Rehmatjan Rehmatjan. They have achieved considerable success in agriculture, food processing, and services, demonstrating women's capabilities and potential in entrepreneurship. These success stories positively inspire other women in the region, encouraging more to dare to start businesses and participate in entrepreneurship.

To help women entrepreneurs achieve their goals, support platforms have been established in Tahachi Town, Heshuo County, Xinjiang, and Tumushuk City. These platforms provide resources such as learning venues, expert guidance, and incubation funds, fostering further development of women's entrepreneurship.

巾帼石榴花
乡村“她”力量

Beyond this, women in both Tahaqi Town, Heshuo County and Tumushuk City are deeply imbued with the spirit of Malan: hard work, pioneering innovation, strong collaboration, and selfless dedication. They keep this spirit in their hearts and put it into practice. In their endeavors, they continuously strive to improve their own families' lives while also providing tangible examples of how to make life better for everyone, contributing their strength to society. Beyond excelling in their own entrepreneurial ventures, they actively participate in various Beautiful Village construction initiatives, contributing to the "Beautiful Village" and "Beautiful Courtyard" programs. They take the lead in weekly road cleaning activities at , shining their light in building a beautiful Xinjiang and charming rural communities.

Overall, the entrepreneurial landscape for women in Heshuo County and Tumushuk City, Xinjiang, shows positive momentum. Government policy support and improved entrepreneurial environments have created favorable conditions, leading to a growing number of women entrepreneurs and increasing influence. However, challenges persist, such as limited startup capital and intense market competition. Therefore, further enhancing the entrepreneurial support system, strengthening training programs, and expanding opportunities are crucial for advancing women's entrepreneurship.

II. Li Qinghua, the "Field Scholar"

Li Qinghua, a Sichuan native, arrived in Tahaqi Town, Heshuo County, Xinjiang with her husband in 1992. Through green organic farming, she pioneered her own new era, doubling her family's economic status while helping neighboring struggling households escape poverty and embrace a brighter future. Starting from odd jobs, the Li couple gradually prospered, yet Li remained driven to pursue an even better life.

In 2015, she conceived the idea of building wealth through specialty agriculture, only to face fierce opposition from her husband, who deemed the venture too risky and likely to result in losses. Undeterred, she researched extensively and consulted agricultural experts to validate her plan. After convincing her husband of its viability through various approaches, she began mastering techniques. She proactively engaged with Heshuo County's agricultural department, sought expert guidance, and, with the assistance of township officials, secured startup funding from the Yangtze River Delta region's counterpart aid cities in Xinjiang. This support included: low-interest loans and startup subsidies. This enabled her to purchase cultivation equipment, construct greenhouses, and expand production. Building on the success of her first crisp-fleshed persimmon crop, Li Qinghua decided to establish a dragon fruit experimental field in 2016. Applying techniques learned during training, she meticulously selected varieties, managed plants, and implemented scientific irrigation and fertilization methods. After three years of effort, she steadily expanded her cultivation. By 2019, with assistance from the local agricultural bureau, she successfully cultivated over ten acres of greenhouse dragon fruit. Bolstered by this success, Li Qinghua began experimenting in 2020 with growing both sweet crisp persimmons and dragon fruit in two greenhouses, achieving substantial sales.

In 2020, she began experimenting with growing sweet crisp persimmons and dragon fruit in two greenhouses, achieving substantial sales revenue.

. Not only did she reap personal rewards, but she also actively promoted green organic farming locally. She provided free planting technique training to villagers, traveled to their fields to solve technical challenges, and connected them with more technical experts and sales channels. This helped more villagers engaged in green organic farming find tangible paths to prosperity. Her exemplary story was featured in media reports across Bazhou and Heshuo regions, establishing her as a respected local entrepreneur.

Li Qinghua's success stems from her keen sense of timing and judgment, her effective utilization of resources from the local agricultural bureau, and crucially, the financial and policy support for entrepreneurship and innovation provided by the local government. By promoting successful cases like Li Qinghua's, the local government has inspired more ambitious and innovative women, fostering a new entrepreneurial economy in the region.

III. "Tofu Beauty" Razimazigul Abudurimim

Zaimuzaigu Abudulim is a wealth-building pioneer at the 53rd Regiment of Tumushuk City, Third Division of the Xinjiang Production and Construction Corps. She embarked on entrepreneurship by opening a tofu shop, blazing a trail to prosperity and becoming the renowned "Tofu Beauty" of Jinhu Yang Town in the regiment. Guided by her ideals as a Communist Party member, she has helped women find employment and emerged as a leading figure in lifting disadvantaged residents of the regiment out of poverty.

After graduating from university, Zaimazai'gu initially worked as an ordinary local employee. Yet, driven by her aspirations for a fulfilling life, she refused to settle for a job with "limited prospects." She boldly actively sought a career aligned with her interests and future potential. This led her to recall childhood memories of tofu. After conducting market research, she discovered a significant gap in the local market for soy products. This finding confirmed her entrepreneurial direction—tofu. Behind her decisive resignation stood her family, who consistently supported her choice. After leaving her job, with the backing of local Women's Federation officials, Zaimazai connected with a reputable tofu workshop in Korla. She left her family and children behind to train there for two months. Later, with policy support from her city's counterpart in Xinjiang, she achieved a "go out, bring in" approach. This helped Zaimazai accumulate the skills and knowledge needed for entrepreneurship, enabling her to better manage her tofu shop. After launching her home workshop, she chose to sell at local markets, continuing this for three years. Once she had established her market presence, she opened her first storefront. While running her business, she also took on apprentices, offering free training to help impoverished families in her agricultural brigade lift themselves out of poverty. In 2017, she was elected as a member of the CPPCC and actively worked to address public concerns. Collaborating with the Women's Federation, she resolved multiple domestic violence cases within her jurisdiction, safeguarding the legal rights of local women.

巾帼石榴花
乡村“她”力量

. She leveraged her influence to encourage local women to pursue entrepreneurial ventures. In 2009 and 2015 she was honored as an Advanced Individual for Ethnic Unity in the 53rd Brigade and a Leading Female Entrepreneur in the Division and Municipal Level. In 2016, she received the titles of "Most Beautiful Family" and Model Worker at the division and municipal level. In December 2020, she was recognized as a Model Worker of the Xinjiang Uygur Autonomous Region.

Zaimazai's entrepreneurial success as a wealth-creation leader and her elevation to autonomous region model worker stem from her diligent character and spirit. She keenly identified market needs, leveraging extensive networks and market feedback to refine product strategies suited to local demand. Local Women's Federation and trade union support provided specialized assistance including study tours and incubation funding. Family backing and understanding also proved vital pillars on her path to achievement. **IV. "Master Seamstress" Li Guirong**

Li Guirong, the "Master Seamstress," stands as an exemplary entrepreneur among these women. As a leading figure in poverty alleviation for Group 4 of Chaganbu Hu Village in Heshuo County, she has operated a successful shop for decades, leveraging her exceptional sewing skills to achieve notable accomplishments in the service industry. Her journey fully demonstrates women's capabilities and potential in entrepreneurship.

As early as her twenties, when the local Women's Federation learned of Li Guirong's entrepreneurial aspirations and strong desire to participate in innovation training, they helped her acquire sewing skills. Li Guirong successfully opened her own tailor shop in Yanqi County. Later, due to personal circumstances, Li Guirong relocated her shop to the main street of Tahachi Town, Heshuo County in 2003. There, she specialized in clothing production and sales, taking on four or five apprentices to learn sewing techniques from her. In recent years, as her understanding of rural revitalization deepened and her shop's business flourished, she transitioned to producing and selling bedding in Chaganbuhu Village, Tahachi Town. Her excellent reputation and strong customer relationships have kept her products consistently popular. This steady stream of orders provides her with a stable income source. Villager Liang Xiaolan remarked, "Her bedding sets are superb—exceptional quality, a wide variety of fabric patterns to choose from, and most importantly, her sewing skills are truly masterful. She's completely trustworthy!" Li Guirong's success stems not only from her own strong desire to innovate and start a business but also from the government platform's support for rural women's innovation and entrepreneurship. Innovation and entrepreneurship training, backed by certificates and tangible business outcomes, has not disappointed Li Guirong's strong motivation to participate. Her products have become renowned as conscientious goods in Tahachi Town. And her dedicated teaching of apprentices is nothing less than passing on the torch. **5. "Spicy Beauty" Aziguli Rehmatjiang**

Aziguli Rehmatjan spent six years transforming from a "laborer" to an "entrepreneur."

Throughout those six years, Aziguli worked in the food service industry, accumulating extensive culinary experience that laid a solid foundation for her future entrepreneurial journey. Ultimately, it was her long-held dream of starting her own business that propelled her to take the decisive step, successfully launching her signature spicy chicken dish and making it an overnight success. When working at the Urumqi Hotel, Aziguli was captivated by the dish "Spicy Chicken."

While working at the Urumqi Hotel, Aziguli became captivated by the dish of spicy chicken. Fueled by her passion for innovation and entrepreneurship, she actively participated in professional training programs focused on business education. She invested her savings to learn the craft from experts, honing her skills and mastering the techniques for preparing spicy chicken, thereby paving the way for her venture. Aziguli understood that merely mastering a skill wouldn't guarantee long-term business success. Only consistent high quality and a unique selling point distinct from other restaurants could secure her venture's triumph. Having invested nearly a decade's savings, she approached it with unwavering determination: "Success is non-negotiable. If I do this, I'll do it right!" Throughout her entrepreneurial journey, Aziguli remained steadfast in her commitment to quality. She selected fresh sourced premium ingredients, and crafted unique seasonings, all dedicated to creating a spicy chicken dish that was both flavorful and distinctive. Her dedication and persistence quickly earned her spicy chicken a devoted following among diners in Tahachi Town. The phrase "It's absolutely delicious—spicy and aromatic!" became the best reward for her efforts.

Throughout Aziguli's entrepreneurial journey, self-motivation has been indispensable. Whether it was her strong drive to participate in entrepreneurship training or her unwavering determination to succeed, both stemmed from her relentless pursuit of her dreams. Aziguli's strong sense of self-efficacy gave her the courage and conviction to take bold action, steadfastly innovate and start her business, ultimately achieving success.

VI. Conclusion

These four outstanding female entrepreneurs shine brightly in their respective fields, embodying courage, determination, and innovative spirit. On this challenging entrepreneurial journey, they have received strong support from the government, particularly in learning new technologies. This governmental assistance has served as both a source of knowledge and skills, and a wellspring of encouragement and confidence.

By mastering new skills, they not only enriched their knowledge base but also applied these techniques to practical entrepreneurship, continually expanding the scope and depth of their ventures. Whether it was Aziguli Rehmatjan's expertise, Zaimazigul Abudurimim's tofu-making craft, or Li Qinghua's dragon fruit cultivation

巾帼石榴花
乡村“她”力量

and Li Guirong's sewing craftsmanship, they have all demonstrated through action the importance of learning. The government provides them with technical training and support, helping them continuously enhance their entrepreneurial capabilities to establish and grow their businesses in a fiercely competitive market.

When confronting difficulties and setbacks, these four female entrepreneurs have all demonstrated an indomitable spirit of perseverance. Despite the rugged path of entrepreneurship, they have remained steadfast in their dreams and goals, overcoming various challenges with determination and wisdom to achieve considerable success. Their accomplishments have not only brought them a moderately prosperous life but also spread hope and courage throughout their villages, inspiring more people to boldly pursue their dreams and create better lives for themselves and their families.

Section 2: Successful Experiences of Women's Innovation and Entrepreneurship in Heshuo County and Hotan City

This section explores exemplary cases of women's entrepreneurial success, examines their innovative practices, identifies essential conditions for women's entrepreneurship in rural revitalization, and provides valuable insights for other regions and communities.

I. Personal Efforts of Entrepreneurs

The entrepreneurial journey is rarely smooth sailing. To introduce fruit varieties uncommon in the Xinjiang market, Li Qinghua endured numerous setbacks. She experimented with planting saplings of Black Tiger melons, August melons, and red pomelos, but these trials failed, resulting in losses exceeding ten thousand yuan. Ultimately, only persimmon and dragon fruit trees bore fruit successfully. This year, she plans to expand her cultivation scale by adding 3 mu of greenhouse space. She will transplant newly successful experimental varieties from her "**fruit laboratory**" to promote them. "I will find ways and explore paths, taking the lead in testing and planting first. By developing specialty crops, I aim to guide my fellow villagers toward prosperity."

Li Qinghua's success story has generated positive social impact locally. She has become a role model for other women entrepreneurs, encouraging more women to engage in entrepreneurship and agricultural development. Inspired by her example, women in Heshuo County have developed a new thirst for learning and exploration, actively seeking opportunities for innovation and entrepreneurship training and practice. Compared to before, they now possess greater courage and determination, daring to face challenges and difficulties, and willing to take on risks and responsibilities. (See Figure 3-1 and Figure 3-2: Li Qinghua harvesting dragon fruit)

Figure 3-1 Li Qinghua harvesting dragon fruit

Figure 3-2: Li Qinghua pruning dragon fruit in the field

Li Guirong, through her clothing production and sales endeavors, successfully created a series of high-quality products leveraging her exceptional sewing skills and unique designs. However, as times and markets evolved, she keenly recognized shifting market demands and chose to transition into the bedding production and sales industry. This decision demonstrated her market sensitivity and courage to innovate. Not only did she adapt to market demands, but she also applied her sewing expertise to bedding production, creating distinctive selling points. Her four-piece bedding sets gained market popularity for their high quality and diverse styles, earning customer trust. Such innovative practices maintained her competitiveness in a fiercely competitive market, further solidifying her entrepreneurial standing. Li Guirong stated: "I not only want to realize my dream of prosperity through hard work, but also inspire my sisters around me to join me on the path to prosperity."

Figure 3-3 Li Guirong cutting fabric

Figure 3-4: Li Guirong organizing fabric

After introducing her homemade tofu to the local market, Zaimuzaigu discovered that people knew very little about tofu and were even reluctant to accept it on their dining tables. Recognizing this issue, she immediately shifted her sales approach. While selling at the market, she explained the tofu-making process, usage methods, and nutritional value. Simultaneously, she prepared various tofu-based dishes at home to share with neighbors, allowing them to experience the appeal of tofu firsthand. By introducing tofu

the first three years of introducing tofu to the local market, Zaimuzaigu often gave it away for free, letting customers sample it before buying. Once customers embraced tofu, she began pairing it with her homemade sauces for sale. Through such methods, she opened up sales channels, and after three years of negative growth in tofu income, a glimmer of hope finally emerged.

Figure 3-5: Zaimuzaigu preparing grilled delicacies Fig. 3-6: Zaimuzaigu preparing fried tofu

Aziguli Rehmatjan chose to start her business in Tahachi Town, Heshuo County. Before launching her venture, she studied local tastes and dietary habits, leading her to open a spicy chicken restaurant in her hometown. Furthermore, she innovated in ingredient selection and seasoning combinations, preserving the traditional chili chicken flavor while adding new characteristics. This practice of grounding her business in local features while embracing innovation gave her chili chicken a unique selling point in the local market.

Figure 3-7 Aziguli preparing vegetables

The village Party branches in Tahachi Town, Heshuo County, and Tumushuk City provided policy guidance and entrepreneurship training. The village Party branches actively assessed their entrepreneurial aspirations and needs, offering guidance on relevant policies to help them better understand entrepreneurship support measures and access startup funding and resources. Additionally, the village Party branches organized a series of entrepreneurship training activities, equipping them with practical skills and knowledge to enhance their competitiveness in business.

Li Qinghua participated in a women's education and training program hosted by the local agricultural department. The program included courses on agricultural techniques,

cropping management. With the village committee's support and training, she acquired the skills and knowledge required for growing crispy persimmons and dragon fruit , including soil conditioning, plant management, and pest and disease control.

With support from the Women's Federation and labor union in 2016, Zaimuzaigu secured an opportunity to study and exchange experiences in Guangdong. After her training, she embarked on a series of outreach lectures, sharing stories of economically independent women who carved out their own success. She trained at the Women Cadres School and earned the honorary title of Outstanding Lecturer. Her lectures expanded from the Third Division to the First Division, yielding remarkable results. Her talks inspired a surge of innovative entrepreneurship in the farm, awakening rural women and contributing significantly to the local poverty alleviation efforts.

Li Guirong learned sewing skills from a local women's federation sewing class in her youth, laying a solid foundation for her future entrepreneurial journey. She opened a tailor shop in Yanqi County, demonstrating her proactive approach to learning and continuous skill enhancement. Later, due to personal circumstances, she decided to relocate the shop to Tahachi Town in Heshuo County. This decision reflected her innovative spirit, characterized by fearlessness in the face of challenges and a willingness to embrace change. Moreover, she mentored four or five apprentices in sewing techniques, passing on her knowledge to the younger generation and ensuring the inheritance and cultivation of entrepreneurial skills.

Despite having worked in the restaurant industry for nearly 20 years, Aziguli still maintains a passion for innovative learning. She invested both money and effort to learn the art of making spicy chicken from professionals. This demonstrates her active participation in entrepreneurial education and training, enhancing her skill level through specialized training and paving the way for her business venture.

Additionally, the village Party branches in Tahachi Town, Heshuo County, and Tumushuk City provided experience sharing and advice throughout their entrepreneurial journeys. By regularly organizing entrepreneurship exchange meetings, these branches created platforms for mutual learning and experience sharing, helping them better navigate challenges. Branch cadres actively communicated with them, offering guidance and advice to safeguard their entrepreneurial paths.

III. Government-Led Motivation

As the core of rural villages and towns, the village Party branch not only provides organizational support for rural development but also plays a vital role in ideological guidance and motivational advocacy. Throughout their entrepreneurial journeys, these four women entrepreneurs received support from the village Party branches of Tahachi Town in Heshuo County and Tumushuk City. By sharing their distinct entrepreneurial stories, the village Party branches conveyed to villagers the values embodied in these women—hard work, positive initiative, and perseverance.

巾帼石榴花
乡村“她”力量

spirit of perseverance and tenacious entrepreneurial drive embodied in their stories, igniting the passion for innovation and entrepreneurship among the people of Heshuo County.

Tahaqi Town and Tumushuk City village Party branches not only provided entrepreneurial guidance and policy assistance under the leadership of the Communist Party of China, but also actively promoted their stories through county and city media platforms, fully showcasing their positive contributions to rural revitalization. The support from the village Party branches not only instilled confidence and motivation in their entrepreneurial journey but also served as an encouraging example for more rural women with entrepreneurial aspirations, thereby fostering the development of the rural economy.

IV. Policy Incentives from Yangtze River Delta's Pairing Assistance to Xinjiang

With the advancement of higher-quality integrated development in the Yangtze River Delta, Shanghai, Anhui, Jiangsu, and Zhejiang are strengthening cooperation to jointly implement aid policies for Xinjiang. The Zhejiang Provincial Women's Federation has long provided strong support and selfless assistance to women's causes in Xinjiang. It actively channels resources such as projects, funds, and talent to Xinjiang, offering various training services for local women. Additionally, initiatives such as the **"Women's Cloud Live Studio"** and **"Sister Support"** programs have been launched. Efforts include enhancing training in common languages and scripts for women, promoting **cervical and breast cancer** screening and assistance for rural women, and conducting specialized **"Hair Salon"** skills training under the Autonomous Region Women's Federation. These actions tangibly support **the "Pomegranate Flower - Women's Aid Xinjiang Initiative."** Additionally, it led officials from the Xinjiang Women's Federation on field visits to learn from exemplary local women's entrepreneurial and innovative practices that contribute to rural revitalization, drawing insights to provide robust support for women's innovation and entrepreneurship in Heshuo County. As a major city in the Yangtze River Delta region, Shanghai focuses on consolidating and advancing rural revitalization while promoting targeted assistance to Xinjiang. It collaborates with Xinjiang's officials and citizens through mutual interaction and shared progress. Shanghai primarily leverages technological innovation to boost industrial development in Heshuo County, Xinjiang. It provides technical support for large-scale, standardized farming in rural areas, empowering local women with technical skills and management expertise. This approach promotes local industrial employment, enhances industrial development capabilities, and maximizes benefits, thereby driving women's innovation and entrepreneurship in Heshuo County and advancing the rural revitalization strategy.

V. "Malan Spirit" Inspires Soaring Rural Women Entrepreneurship

Under the leadership of the Communist Party of China, the Malan Spirit serves as a powerful motivator, inspiring people to strive tirelessly for personal dreams, family happiness, and societal progress. These four entrepreneurial women have all been profoundly influenced by the Malan Spirit. Drawing strength from the Party's fine traditions, they have integrated unwavering faith and the original aspiration to seek happiness for the people into their entrepreneurial practices. Li Qinghua, Zaimuzaigu Abudulim, Li Guirong, and Aziguli Rehmatjan Rehmatjan have all embodied the inheritance and promotion of the Malan Spirit through their entrepreneurial actions. Guided by the Malan Spirit, Li Qinghua fearlessly tackled difficulties, diligently mastered cultivation techniques, and continuously introducing new fruit varieties and actively promoting green organic cultivation, fully embodying the qualities of diligence in pursuit of prosperity and continuous innovation inherent in the Malan Spirit.

Zaimazigu Abudulimu, by opening a tofu shop, not only achieved prosperity for herself but also provided employment opportunities for local women.

. Guided by the Malan spirit, she embraces helping others and selfless dedication. Unsatisfied with personal success alone, she actively participates in social welfare initiatives. Through her entrepreneurial efforts, she inspires more people to engage in innovation and entrepreneurship, embodying the Malan spirit's selfless devotion and mutual support.

Li Guirong began by establishing a tailor shop. Through diligence and continuous learning she not only became a local master seamstress but also expanded her business scope to include the production and sale of bedding. Guided by the Malan Spirit, she embodies the values of hard work, perseverance, and the belief that a better life can be created through one's own efforts.

Inspired by the Malan Spirit, **Aziguli** Rehmatjan broke free from a life of wage labor to pursue her entrepreneurial dream by opening a spicy chicken restaurant. She overcame her husband's opposition and numerous obstacles, maintaining an optimistic attitude and bravely facing challenges, embodying the Malan Spirit of forging ahead with courage and daring to explore new paths.

Section III: Women's Power Driving Rural Revitalization

The success stories of Li Qinghua, Zaimuzaigu Abudulimu, Li Guirong, and Aziguli Rehmatjan underscore the vital role of women's strength in advancing rural revitalization. As a female entrepreneur, Li Qinghua boldly pursued her dreams and achieved remarkable results in various fields through her own efforts and innovative spirit. They not only generated economic benefits for themselves but also actively promoted local economic development, contributing to the revitalization of the rural economy. Their success serves not only as a personal example but also as an inspiration for other women to participate in entrepreneurship and economic development.

Under the support of the Communist Party of China and the leadership of the government, women in Heshuo County and Tumushuk City are eager to learn new technologies and explore new paths to prosperity. They participate in innovation and entrepreneurship training programs organized by local village committees. Role models like Li Qinghua, Zaimuzaigu Abudulimu, Li Guirong, and Aziguli Rehmatjan have gained the courage and determination to confront challenges and hardships. Women's efforts and accomplishments have played a positive role in promoting rural revitalization, contributing to the prosperity and sustainable development of the rural economy.

I. Women's Power Stimulates Greater Public Participation and Enthusiasm in Rural Revitalization

Women, as the "half of the sky" in rural development, possess equal potential and capability for innovation and entrepreneurship. Li Qing

's success story conveys to society that women can achieve remarkable results in rural areas, inspiring greater Women's interest and motivation in entrepreneurship and agricultural development. Rural revitalization requires fully tapping into and utilizing women's entrepreneurial potential to achieve the goal of universal participation in rural economic development. Secondly, women have played a vital role in initiatives such as **“Beautiful Villages”** and **“Beautiful Courtyards”**. “Women in every household have worked to create harmonious and beautiful courtyards that meet the “Four Beauties” standard of “separating four elements” and maintaining long-term excellence. They have adhered to the principles of adapting to local conditions and household circumstances, enhancing the “appearance” and **“charm”** of their homes. Clutter has been cleared from front and back yards, and a new culture of civility has taken root in people's hearts. Gradually, a beautiful picture has emerged: “courtyards with character, landscapes within the yard, and villages as picturesque as paintings.”

II. Women's Power Drives Transformation and Upgrading in Rural Agricultural Development

Traditional agricultural crops face market saturation, declining competitiveness, and stagnant income growth for farmers. The active participation of women entrepreneurs has injected new vitality and innovation into agriculture. For example, Li Qinghua introduced specialty agricultural products, bringing southern fruits to Xinjiang, thereby enhancing the added value and market competitiveness of local agricultural products and driving agricultural diversification. Women's innovative entrepreneurial activities provide new momentum and opportunities for rural economic development.

III. Women's Power Optimizes Poverty Alleviation Mechanisms

To fully implement the requirements of the 19th CPC National Congress on resolutely winning the battle against poverty and the spirit of General Secretary Xi Jinping's important speeches on poverty alleviation, Heshuo County in Xinjiang actively contributes women's strength to the decisive battle against poverty, supporting targeted poverty alleviation. Taking Li Qinghua as an example, women in Heshuo County adopted a dual approach of online and offline efforts to actively implement women's poverty alleviation initiatives: Through the **“Double Learning and Double *Comparison*”** base, they motivated rural women to develop household economies, promoted rural women's entrepreneurship and employment, and achieved significant economic and social benefits; They collaborated with relevant technical departments to organize lecture series and provide technical support, facilitating the resumption of operations at agricultural bases and enhancing skills. They also established targeted poverty alleviation plans with surrounding impoverished counties and regions, organizing paired assistance for registered poor households to provide both material support and intellectual empowerment, thereby advancing poverty alleviation efforts. In 2016, the hardworking and capable **Zaimuzaigu** Abudulimu seized another opportunity. With support from the farm's labor union, she expanded her shop, added new equipment, and established her own tofu processing plant. She hired five individuals from disadvantaged backgrounds to work at the factory, not only increasing tofu production but also solving employment and income challenges for these families. To empower more ethnic minority women to start businesses and increase their income, she regularly invites them to visit her tofu workshop for learning opportunities. She takes on apprentices free of charge, teaching them techniques hands-on and encouraging and guiding them to open their own shops. Currently, five apprentices—Halidan Yusup, Burmugu, Aziguli Rehmatjan Rehmatjan, and others—have opened their own businesses in Bachu County, Xiahe Town of the 50th Regiment, Tangyi Town of the 51st Regiment, and other locations, including

Under her exemplary leadership, more ethnic minority women in the farm have had their minds opened and ventured out to start their own businesses, increasing their income and achieving prosperity.

In summary, women's power plays a vital role in rural revitalization. Li Qinghua's success story serves as a model for other women. Her courage, determination, and innovative spirit inspire more women to engage in entrepreneurship and agricultural development. Her achievements extend beyond economic success; she empowers other women with confidence and motivation, igniting their desire to unlock their potential and pursue their dreams. Through their hard work and innovative spirit, women entrepreneurs have driven the transformation and upgrading of agriculture, making positive contributions to the prosperity and sustainable development of the rural economy. Simultaneously, the advancement of women's education has provided these female entrepreneurs with the knowledge and skills needed to play an even greater role in rural revitalization, laying a solid foundation for their future impact.

Chapter 4: Key Issues and Causes of Women's Innovation and Entrepreneurship in Heshuo County and Hotan City

and Analysis of Causes

Section 1: Problem Analysis

Survey findings indicate that with strong government support and promotion, relevant departments have collaborated closely to facilitate the smooth implementation of women's education and skills training programs. Women who have participated in innovation and entrepreneurship training generally express high satisfaction with the outcomes of their initiatives. Regarding the implementation of the rural revitalization strategy, women have played a pivotal role as the **"pillars of strength"** in this process. Our team has also conducted in-depth analysis of typical cases of rural women's innovation and entrepreneurship under the influence of family and social culture, actively identifying potential issues based on actual conditions. Overall, Heshuo County's rural women's training programs and rural revitalization efforts have achieved certain results, but the following issues remain:

I. Education and Training

Despite considerable efforts by village officials to promote entrepreneurship education and training, their influence remains limited. Survey results indicate that when asked, "Have you participated in government-organized training programs?" less than 30% reported attending three or more sessions, while approximately 41% of rural women had never participated in any training. This reveals that local women attend training infrequently and lack in-depth understanding of the programs. Furthermore, the training environment requires improvement, with outdated facilities and insufficient resources negatively impacting the learning experience.

Second, training formats primarily rely on lectures and videos for theoretical instruction, with limited hands-on practice. This approach may leave many rural women confused, resulting in suboptimal training outcomes.

Furthermore, certificate issuance faces challenges such as high thresholds and delays. Among the questionnaire respondents, only 10% of women indicated they consistently received completion certificates, dampening their enthusiasm for participating in training.

II. Social Support

Nearly 60% of women surveyed reported annual incomes below 60,000 yuan. Due to insufficient financial safeguards, existing savings often fail to meet the practical demands of rural women's entrepreneurial ventures. Although village committees have established several startup funds, their scale and coverage remain inadequate to address these needs. Compared to urban areas, rural regions exhibit weaker entrepreneurial support networks. For many rural women, their access to information channels is limited. They primarily navigate entrepreneurial challenges independently or rely on guidance from relatives and friends, lacking scientific positioning and planning.

III. Family Factors

Rural households may be influenced by traditional notions that women should focus on household chores and child-rearing. When entrepreneurial activities conflict with family responsibilities, rural women often struggle to gain full understanding and support from their families, which invisibly increases their entrepreneurial pressures.

Additionally, heavy household burdens leave rural women with insufficient time and energy to participate in entrepreneurship training, preventing them from acquiring essential professional knowledge and skills. This, to a certain extent, constrains the long-term development of their entrepreneurial endeavors.

IV. Perceptions and Mindset

Although nearly 70% of survey respondents acknowledged rural women as "pillars" in rural revitalization, traditional mindsets and individual perceptions still hinder their participation to some extent. Traditional gender roles emphasizing "men as breadwinners and women as homemakers," cultural notions of "male strength and female weakness," and the marital concept of "residing with the husband" constitute primary ideological barriers. These constraints limit local women's participation in social activities like rural revitalization. Married women often experience narrowed social circles and fragmented existing social capital, hindering their attempts at innovation and entrepreneurship. Furthermore, society generally places low value on women. This negatively impacts rural women's self-perception, such as insufficient recognition of their own status and value, which in turn diminishes their motivation to start businesses. Only a minority of local women receive support from family and others when starting businesses. In short, deep-rooted traditional concepts have become the main ideological barriers, forming mental constraints.

V. Policy Promotion

According to the collected questionnaire results, nearly 90% of rural women have only heard of the concept of the "Rural Revitalization Strategy" but are unclear about its specific content. Although some initiatives centered on women's contributions to rural revitalization have been gradually promoted, issues such as limited outreach, few methods, low efficiency, and insignificant results mean that local rural civilization construction still needs improvement.

This indicates inadequate publicity for rural revitalization and a lack of vibrant atmosphere for rural civilization development.

Furthermore, data analysis from the comprehensive questionnaire reveals that local women face challenges in innovation and entrepreneurship, including insufficient funding, lack of technical skills and knowledge, and inadequate grassroots support. Although relevant agencies have provided some policy support and organized activities to boost rural revitalization, the overall effort remains insufficient. Women's federations lack vitality and cohesion, and their working mechanisms lack long-term sustainability. This results in insufficient endogenous motivation among women to achieve poverty alleviation.

巾帼石榴花
乡村“她”力量

the progress of women's contributions to rural revitalization remains relatively slow.

Section 2: Analysis of Causes

This section analyzes the causes behind the current state of women's innovation and entrepreneurship practices in rural areas, aligning with the findings from the previous chapter's surveys and interviews and considering the fundamental conditions of Heshuo County.

I. Internal Factors

(1) Impact of Self-Perceived Knowledge Level on Participation in Educational Training Activities

Figures 2, 4, and 5 in the preceding section illustrate the distribution of innovation and entrepreneurship participation rates across different age groups, the prevalence and characteristics of educational attainment among rural women, and the proportion engaged in various occupations. These data reveal that differences in cognitive levels are a significant factor contributing to low participation in education and training (Figures 1, 7, and 9).

1. Differences in Educational Attainment

Differing educational backgrounds make it difficult for rural women to clearly define their roles. Influenced by society and family, they develop distinct values and worldviews. Some women hesitate due to limiting beliefs about their capabilities and positioning, adopting a wait-and-see attitude toward innovation and entrepreneurship training. Educational disparities are a key cause of cognitive differences.

2. Differences Across Age Groups

Age correlates with life experience, yet traditional societal perceptions of women's roles remain narrow and unequal. Influenced by self-perception and societal conditioning, rural women of different age groups make distinct choices regarding innovation and entrepreneurship training.

3. Differences in Proactivity Driven by Career Perspectives

Career perspectives stem from the diverse occupations and prevailing social attitudes among rural women. For instance, those engaged in individual businesses may have a clearer grasp of their income potential and exhibit higher motivation to participate in innovation and entrepreneurship activities when dissatisfied with their earnings. In contrast, women in stable positions as officials tend to focus more on the potential gains and losses of such activities, resulting in lower participation motivation.

(2) Household Burdens Are Inversely Proportional to Rural Women's Participation in Educational Training and Innovation/Entrepreneurship Activities

For rural women, the entrenched perception linking household labor burdens to their roles constitutes a primary barrier preventing them from taking concrete steps toward innovation and entrepreneurship.

Surveys reveal that when men migrate for work, women must care for multiple household members while also seeking employment to supplement income. This demonstrates that heavy household burdens prevent rural women from engaging in innovation and entrepreneurship.

go out to work to earn income. This demonstrates that rural women bear heavy household burdens, which leads to their insufficient participation in innovation and entrepreneurship activities. At the same time, traditional social notions also hold that women should stay at home to shoulder the responsibilities of housework and caring for family members. The existence of these notions further increases the difficulty for them to participate in innovation and entrepreneurship activities.

Interviews with villagers in Tongheshuo County, along with improvements in supportive policies and tangible outcomes from relevant departments, validate these observations. These policies provide greater resources and support for women's participation in innovation and entrepreneurship education and training, helping them overcome challenges while boosting confidence and entrepreneurial awareness. They also contribute to shifting traditional social perceptions, enhancing women's status and rights, and enabling them to realize personal value and contribute to societal development. Thus, the formulation and implementation of such policies play a positive role in promoting women's engagement in innovation and entrepreneurship education and training.

II. External Factors

(1) Alignment of Existing Training Content with Rural Women's Cognitive Levels

The content of innovation and entrepreneurship education and training lacks specificity, failing to enable rural women to truly recognize the importance of participating in innovation and entrepreneurship for their own development, as well as for the development of their families and villages. To address this, it is necessary to strengthen the design of training content, making it more closely aligned with the actual needs and entrepreneurial potential of rural women. This will allow them to genuinely master entrepreneurial skills and increase their chances of success.

(2) Alignment of Training Channels and Faculty with Women's Cognitive Levels

The channels and methods for innovation and entrepreneurship education and training are insufficiently diverse, failing to reach a broader segment of rural women. To address this, it is necessary to expand the coverage of such training through multiple avenues and approaches. While teaching resources and faculty for innovation and entrepreneurship education are relatively adequate at present, there is a relative shortage of instructors whose expertise aligns with the specific entrepreneurial needs of rural women. Further efforts are required to strengthen the development of the teaching faculty and integrate resources for innovation and entrepreneurship education and training, thereby enhancing teaching quality and practicality.

Reflecting on Achievements to Date While policy formulation and implementation have positively promoted women's participation in innovation and entrepreneurship education and training, tangible outcomes require further enhancement. Content and delivery methods must be refined to boost the practicality and effectiveness of entrepreneurship education.

巾帼石榴花
乡村“她”力量

Chapter 5: Countermeasures and Recommendations for the Development of Women's Innovation and Entrepreneurship Practices in Heshuo County and Hotan City

Strategies and Recommendations

In response to the aforementioned issues, our team has clarified the current status and challenges of women's education in promoting rural revitalization in Heshuo County, Bayingolin Mongol Autonomous Prefecture, Xinjiang. After carefully studying typical cases and conducting in-depth interviews with local village committee secretaries, Women's Federation cadres, deputy town mayors, and others, we have collectively discussed and deeply considered the following feasible countermeasures and recommendations. These are intended to improve the development challenges of women's education in Heshuo County, Bayingolin Mongol Autonomous Prefecture, Xinjiang, promote the professional development of women in Heshuo County, and encourage local women's independent innovation and entrepreneurship, thereby better serving the comprehensive revitalization of rural areas.

Section 1: National Macro-Guidance to Drive Innovation and Entrepreneurship

General Secretary Xi Jinping has repeatedly emphasized: "In building a new development paradigm, promoting high-quality development, and advancing Chinese-style modernization, Xinjiang faces new opportunities and must make new contributions. Building upon its resource endowments, geographical advantages, and industrial foundations, Xinjiang must vigorously advance scientific and technological innovation, cultivate and strengthen distinctive industries with comparative advantages, actively develop emerging industries, and accelerate the construction of a modern industrial system that reflects Xinjiang's unique characteristics and strengths. This will propel Xinjiang onto a path of high-quality development, enabling it to join the nation in comprehensively building a modern socialist country." To further advance rural revitalization, enhance publicity for policies related to rural revitalization and women's innovation and entrepreneurship, and encourage Xinjiang women to pursue independent innovation and entrepreneurship, the state can provide more resources and support through policy measures.

I. Implementing the Rural Revitalization Strategy to Boost Women's Innovation and Entrepreneurship

First, the rural revitalization strategy and women's entrepreneurship complement each other perfectly, forming a harmonious partnership. The implementation of the rural revitalization strategy will objectively accelerate women's entrepreneurship. Simultaneously, as indispensable participants in rural revitalization, women will become a significant driving force for this initiative as their entrepreneurial endeavors develop. Whether it involves optimizing the structure of rural products or industries, accelerating the integrated development of primary, secondary, and tertiary sectors in rural areas, or enhancing the innovation capacity of agriculture and farmers, it is difficult to imagine achieving these goals without the participation and contributions of women.

Second, rural revitalization and women's entrepreneurship share inherently unified objectives. Women predominantly engage in traditional sectors such as catering, apparel sales, domestic services, animal husbandry, floriculture, processing and sales of agricultural byproducts, food processing and sales, education and training, infant care, ethnic handicrafts, and jewelry crafting. This alignment ensures a high degree of consistency between women's entrepreneurial pursuits and the strategic goals and direction of rural revitalization. For instance, the Women's Federation of Jinning District actively collaborates with relevant functional departments to provide vocational skills training in computer literacy, culinary arts, beauty and hairdressing, property management, and other fields based on demand.

providing information and technical services to unemployed women, effectively enhancing their re-employment capabilities.

II. Multi-faceted Policy Promotion and Continuous Advancement of Women's Initiatives

To thoroughly implement the guiding principles of General Secretary Xi Jinping's important speech at the Central Talent Work Conference and the "Several Measures to Support Female Science and Technology Talents in Playing a Greater Role in Scientific and Technological Innovation" issued by the Ministry of Science and Technology, the All-China Women's Federation, and 11 other departments, Relevant departments should employ diverse promotional methods to expand the reach of the rural revitalization strategy and related training programs, enhance the visibility of grassroots women's organizations, and attract more women to participate in training and contribute to rural revitalization. This includes both online and offline approaches such as developing official WeChat public accounts, television coverage, and printing and distributing flyers to prevent information gaps.

III. Leveraging Local Integrated Media to Attract Women Entrepreneurs in Xinjiang

Relevant departments should leverage emerging media platforms, utilizing popular formats like self-media accounts to promote the rural revitalization strategy, disseminate the latest policy directives, and highlight new developments in rural areas under the new era. This approach mobilizes rural women to actively participate in the revitalization process. Amidst deep media convergence, Xinjiang's integrated media centers leverage their omnichannel dissemination strengths to intensify outreach in rural areas. This propels suburban villages onto the media convergence express, propelling them into public awareness. Rising visibility amplifies their influence, transforming them into sought-after leisure destinations and accelerating rural revitalization onto the fast track. Simultaneously, this initiative attracts more Xinjiang women to discover boundless future possibilities, encouraging them to take bold steps toward building a brighter tomorrow together.

IV. Multiple Measures to Support Entrepreneurship, Highlighting Women's Contributions

Fully support women's home-based entrepreneurship projects in the Xinjiang Production and Construction Corps, with local Women's Federations and communities jointly encouraging local women's employment and entrepreneurship. Enable more women to step out of their homes for employment, becoming "new-era female workers" who receive regular wages. To broaden employment and entrepreneurship channels for women, Xinjiang can actively establish skill training platforms for workers, offering targeted training in knitting, sewing, cooking, and other skills. Guide women toward flexible employment in new economic sectors like online retail and livestreaming sales, enabling them to increase income locally. Furthermore, to fully stimulate women's willingness to pursue employment and entrepreneurship, order-based skills training in planting and animal husbandry can be offered. By launching initiatives like the "Women's Achievements" campaign and selecting "March 8th Red Flag Bearers," advanced role models can be highlighted to ignite women's enthusiasm for employment and entrepreneurship.

巾帼石榴花
乡村“她”力量

V. Continuous Improvement of Entrepreneurship Policies and a Three-Pronged Support System

Establish a three-tiered policy support system at the national, governmental, and institutional levels. At the national level, policies should holistically address all stages and elements of women's entrepreneurship while considering their unique characteristics. Entrepreneurial policies should provide comprehensive support—from cultivating motivation and offering opportunities to assisting startups and fostering growth—while optimizing the entrepreneurial environment for women and enhancing the effectiveness of policies in supporting their business activities. At the governmental level, a multi-tiered, multi-channel financing system for women's entrepreneurship should be established to provide capital support. Concrete measures should integrate entrepreneurship education with quality education and vocational skills training. While gradually expanding the reach of entrepreneurship education, these efforts should maximize the stimulation of entrepreneurial spirit and motivation among women across all social strata. At the institutional level, actively explore pathways for government procurement of social entrepreneurship services and establish specialized institutions serving women's entrepreneurship, such as women's entrepreneurship incubators. Simultaneously, fully leverage the roles of women's federations and Communist Youth League organizations at all levels.

Section II: Implementation of Innovation and Entrepreneurship Support through Pairing Assistance to Xinjiang

The Xinjiang aid initiative has received high priority from the Party and the state, with its forms and content continuously enriched and expanded, and its mechanisms and models constantly refined and innovated. It has achieved remarkable economic and social benefits, becoming a crucial policy and institutional framework for narrowing the development gap between eastern and western regions and addressing ethnic issues in China. The Yangtze River Delta region can establish a framework for counterpart aid cooperation with Xinjiang, fully leveraging the complementary resources between the two regions to implement project-based, industrial, and educational support for Xinjiang.

I. Establishing the "Shanghai" Platform to Foster Innovation and Entrepreneurship Through Projects

To further stimulate women's innovation and entrepreneurship vitality and deepen the Women's Employment and Entrepreneurship Initiative, Shanghai can encourage local enterprises to establish branches or cooperative projects in Xinjiang. This would provide local women with comprehensive employment training, expand job opportunities, and drive women's employment and income growth.

Concurrently, Shanghai can establish industrial parks in Xinjiang, actively upgrading and transforming industries to align with market demands. By leveraging Xinjiang's advantages in energy resources, cost competitiveness, and geographical positioning, Shanghai can integrate information resources and provide organizational and technical support to encourage more women to engage in innovation and entrepreneurship.

II. Industrial Development to Boost Income through Innovation

Zhejiang Province's counterpart assistance to Aksu Prefecture has spanned over a decade. The three major initiatives—"Ten Cities, Hundred Stores," "Hundred Villages, Thousand Factories," and "Ten Thousand Mu, One Billion Yuan"—have become hallmarks of Zhejiang's Xinjiang aid, earning widespread acclaim from all sectors of society.

Zhejiang prioritizes industrial assistance as the cornerstone of its support for Xinjiang. By leveraging Xinjiang's abundant resources—such as long-staple cotton, jujubes, and fragrant pears—the province can build a modern industrial system. Zhejiang encourages farmers to "go global" as a key agricultural development strategy. Building on this momentum, it can establish agricultural processing enterprises and cooperatives in Xinjiang, introducing market-oriented approaches, facility agriculture, and standardized production to rural women. This empowers them to participate in emerging industries.

Additionally, Zhejiang can organize agricultural expos to bring Xinjiang's distinctive, high-quality products to East China markets. Relevant departments should facilitate connections, cultivate professional exhibition teams, and empower women's innovation and entrepreneurship to enhance the competitiveness and value-added potential of Xinjiang's agricultural products.

III. Jiangsu and Xinjiang as One, Co-Creating a New Future

Jiangsu Province's Xinjiang aid program has been implemented for over a decade. Guided by Xi Jinping Thought on Socialism with Chinese Characteristics for a New Era, Jiangsu has thoroughly implemented the Party's governance strategy for Xinjiang in the new era. Embracing the spirit of "loyalty, love for the borderlands, innovation, pragmatism, resilience, and pioneering initiative," Jiangsu is striving to write a new chapter in its Xinjiang aid efforts.

In response to the current situation in Xinjiang characterized by uneven educational development, unbalanced allocation of educational resources, and relatively low educational standards, Jiangsu Province will intensify educational exchanges and assistance. This includes implementing targeted support and cooperative projects in basic education and vocational training, dispatching technical experts and educators to engage with local women through exchanges and partnerships. Advanced technologies will be localized to facilitate women's understanding, acceptance, and application, thereby enhancing their overall capabilities. Comprehensively unleash the innovative potential of female talent to better drive innovation-led development, supporting the integrated development strategy and jointly creating a new future powered by "her" strength.

IV. Promote Dedicated Entrepreneurship Funds to Ensure Implementation of Entrepreneurial Outcomes

The Yangtze River Delta region can establish a dedicated venture fund focused on supporting entrepreneurial projects by Xinjiang women, helping those with entrepreneurial aspirations take their first steps.

Funding sources may include government allocations, social donations, and corporate sponsorships to ensure sufficient scale for diverse entrepreneurial initiatives. For women in the early stages of entrepreneurship, the fund can provide low-interest or interest-free loans to address funding challenges and mitigate risks. For promising projects, it can offer grants to facilitate successful launches and drive the implementation of innovative outcomes. A dedicated department should be established to oversee these initiatives, with specialized personnel ensuring funds are allocated to genuinely needed and viable projects.

巾帼石榴花
乡村“她”力量

Section III: Mobilizing Multiple Forces to Support Innovation and Entrepreneurship

Advancing rural revitalization through innovation and entrepreneurship is a systemic endeavor requiring the convergence of multiple forces. These include local governments, educational institutions, and women themselves, collectively forming a robust foundation for promoting women's participation in innovation and entrepreneurship to drive rural revitalization.

Government departments implement policies, provide financial support, and integrate resources to create more opportunities for women entrepreneurs. Simultaneously, the government encourages women's participation in rural industrial development, driving the diversification and sustainable growth of the rural economy. Educational institutions in Xinjiang play a pivotal role in cultivating women's innovation and entrepreneurship talent. They help women enhance their capabilities, navigate market competition, and overcome entrepreneurial challenges, thereby injecting new momentum into rural revitalization. Individual women serve as the backbone of rural revitalization and innovation-driven entrepreneurship. Xinjiang women have demonstrated remarkable entrepreneurial spirit and innovative capabilities in sectors such as family farming, handicraft production, and tourism.

Local forces in Xinjiang—including the government, educational institutions, and women themselves—are jointly committed to building a robust support system for women's innovation, entrepreneurship, and rural revitalization. Their collaboration and efforts provide Xinjiang women with greater development opportunities while contributing positively to the prosperity and sustainable development of the rural economy. **I. Multiple Support Measures by Local Governments**

Governments at all levels and relevant functional departments should further enhance their focus on women's development, improve and refine policies for rural women's participation in rural revitalization based on local conditions, and support and encourage rural women to actively engage in rural revitalization.

1. Strengthen Oversight and Ensure Full Protection

Local governments can draw on the advanced law enforcement concepts and successful experiences of cities assisting Xinjiang. By strengthening supervision and management of the labor market and enhancing the law enforcement and professional capabilities of officials, they can protect women's employment rights through legal means and provide legal aid when necessary. Promptly address discriminatory practices against rural women in employment to alleviate challenges such as limited job opportunities and restricted career choices. This ensures women's fundamental right to employment and career selection, bolsters confidence among ambitious women, and empowers them to contribute effectively to rural revitalization.

Establish employment guidance departments in villages and townships in collaboration with local Women's Federations and labor unions. Invite outstanding cadres from cities providing aid to Xinjiang to offer guidance, providing unemployed women in rural areas with proper career direction and systematic employment counseling. Offer various entrepreneurial support and preferential policies to women who have started businesses, enabling them to fully leverage favorable conditions and empower their entrepreneurial journeys.

2. Incubation Bases: Evolving with the Times

In today's rapidly evolving society, the hardware facilities of government-run vocational training bases often fail to keep pace with technological advancements. Software facilities—namely, technical personnel—are also limited, with skills often stuck at the level of previous-generation equipment. Local governments should promptly incorporate residents' feedback keep pace with the times. Software facilities—namely, technical personnel—are scarce, and their skills remain rooted in outdated equipment. Local governments should promptly incorporate residents' feedback and needs by upgrading equipment and sending technical staff for training in the latest technologies to support new equipment operation and meet evolving community demands. For example: Burqin County's Agricultural and Pastoral Skills Training Practical Base operates with a market-driven approach, aiming to enhance the skills and qualifications of farmers, herders, and organized migrant workers. It prioritizes training in high-demand occupations and intermediate-to-advanced skills. Based on corporate staffing needs and individual preferences, it delivers targeted, customized training through models such as "master-apprentice mentoring," "Skills + National Common Language + Quality" composite training models to actively cultivate skilled personnel needed by enterprises.

Government departments should establish special funds to cover equipment upgrades, maintenance, personnel dispatch, and hiring as a baseline guarantee for local technical education and training. These funds may be administered by local governments, sourced through special fund allocations or aid project applications, and subject to oversight, approval, and outcome verification by dedicated supervisory departments.

3. Expanding E-commerce Pathways to Boost Rural Revitalization

The report to the 20th CPC National Congress proposed developing distinctive rural industries to broaden farmers' income growth channels. Industrial revitalization forms the foundation for comprehensive rural development. For rural areas, industrial growth must ultimately translate into increased farmer incomes—a principle equally applicable to rural e-commerce.

In recent years, driven by rapid advancements in information technology and modern logistics, e-commerce has flourished across Xinjiang, leveraging its comprehensive transportation network of highways, railways, and civil aviation.

Staff at Turpan's Naan Industrial Park utilize live streaming to promote naan products. This integrated "industry + tourism + culture" combines production, cultural experiences, and sales. By developing the naan industry, it drives tourism growth.

Local governments should conduct specialized training to continuously enhance capabilities in managing, promoting, and facilitating e-commerce, fully exploring new pathways in implementing the digital economy strategy. Regional commerce bureaus should further enhance the application capabilities of relevant departments and enterprises in live-streaming e-commerce, strengthen the professional competence of e-commerce practitioners, and regularly advance e-commerce talent training to propel the high-quality development of Xinjiang's e-commerce industry. Local governments should share insights on rural e-commerce innovation and upgrading, new models of entrepreneurship, e-commerce supply chains and financial services, emerging trends, and exemplary cases. Focus should be placed on new e-commerce models, e-commerce's economic and social services, emerging e-commerce formats, e-commerce operations,

中国石榴花
乡村“她”力量

and influencer economy analysis.

Government departments should establish top-level designs, strengthen organizational support, cultivate e-commerce experts, and continue efforts in product quality enhancement, brand promotion, and standardized production. Focus should be placed on expanding market share and building brand resources, leveraging the strengths of rural e-commerce and local cultural characteristics to amplify the comprehensive benefits of the e-commerce industry and promote Xinjiang's agricultural specialty products to broader markets.

General Secretary Xi Jinping emphasized that industrial revitalization must be prioritized in rural revitalization efforts. This involves actively extending and expanding agricultural industrial chains, cultivating new rural industries and business models, and continuously broadening channels for farmers to increase their income and prosperity. All regions should leverage various e-commerce platforms to actively develop new rural industries and business models, vigorously promote the growth of the rural e-commerce industry, expand sales channels for agricultural products, increase farmers' income, and contribute to rural revitalization.

4. Promoting Tourism Through Culture, Revitalizing Xinjiang Through Tourism

Rural tourism serves as a crucial pivot for addressing Xinjiang's imbalance between long-distance travel and short-stay tourism, and it is also a vital engine for rural revitalization. Implementing General Secretary Xi Jinping's important directives on rural tourism, we must adhere to the principle of shaping tourism through culture and highlighting culture through tourism. This involves promoting the deep integration of culture and tourism, building rural tourism brands, radiating and driving income growth for the masses, and advancing rural revitalization and high-quality economic development.

Heshuo County held its third Rural Tourism Culture Festival at the Malan Hongshan Military Museum Park to vigorously develop rural tourism, promote the deep integration and healthy development of the "red culture + **tourism**" industry, continuously motivate farmers and herders to participate in tourism, enhance rural tourism service standards, drive tourism industry growth, boost income for more herders, and enable them to share in the achievements of beautiful countryside construction. This year, Aksu Prefecture aims to establish itself as a regional cultural tourism hub by implementing the "**Tourism Plus**" and "**Plus Tourism**" development strategies. The focus is on developing rural cultural tourism products and services around major scenic areas, fostering diverse, personalized, and professional growth in rural cultural tourism. This allows visitors to experience pastoral life in agricultural picking gardens and scenic parks.

To implement the principle of "cultivating tourism through culture and highlighting culture through tourism," the region is driving the flourishing development of cultural undertakings, cultural industries, and tourism. This effort paints a new picture of "poetry" and "distant horizons," fully demonstrating the soul-nurturing and empowering role of culture, as well as the people-centered and driving force of tourism. All regions and districts should adhere to the guiding principle of the "**Xinjiang is a Good Place**" brand, build a multi-tiered, full-industry-chain brand system covering natural, cultural, ecological, and humanistic domains to guide and promote the creation of destination tourism brands. Regions should enrich cultural and tourism consumption platforms and scenarios, improve consumption facilities, enhance the consumption environment, and continuously elevate the level of cultural and tourism consumption. To further advance rural revitalization and solidly promote the construction of beautiful villages, all regions should leverage their resource endowments, industrial foundations, and geographical conditions. By creating demonstration points for rural revitalization with the principles of "one highlight per township" and "one specialty per village," they should form a new pattern of "one village, one industry" that "drives development from points to lines and from lines to areas." This will continuously enhance the quality and effectiveness of Party building in leading rural revitalization.

II. Integration of Educational Resources at All Levels

In our survey, over half of the respondents were women aged 21-30, accounting for 52% of the total. Next were women aged 31-40 and 41-50, representing 27% and 18% respectively, while respondents aged 50 and above constituted a smaller proportion. Regarding educational attainment, those with college degrees or higher constituted the largest group at 75%. Among the remaining respondents, 13% had high school diplomas, 5% had junior high school diplomas, and 7% had elementary school diplomas or lower.

Therefore, we have preliminarily stratified our learners based on age and educational attainment to provide more targeted educational support tailored to different skill levels.

1. Basic Education

For rural women who lack basic education or have only received limited schooling, local governments and non-profit organizations can provide foundational educational support, including literacy and numeracy training, to enhance their core skills. Concurrently, educational assistance policies for Xinjiang have significantly reduced the challenges of achieving comprehensive basic education coverage through targeted resource allocation from partner regions.

2. Vocational Education

Regarding vocational training, we believe that different vocational training opportunities should be available for rural women of varying ages and educational backgrounds. Younger women can receive technical and vocational skills training to enable participation in more innovative and high-value-added industries, such as agricultural technology, handicraft production, or e-commerce. Older women can be provided with training more suited to their needs. Additionally, for rural women with higher educational attainment, advanced vocational training or entrepreneurship training can be offered to help them translate their knowledge into tangible business opportunities.

3. Entrepreneurship Training and Support

Regarding entrepreneurship training, rural women of all ages can benefit. Such training may cover areas like business plan development, marketing, and financial management to help them better operate their enterprises. Local governments can hire relevant professionals to conduct workshops for support, while educators can implement tiered instruction for women with varying educational levels—providing more foundational entrepreneurship training for those with lower education and more advanced knowledge and skills training for those with higher education.

4. Entrepreneurial Support Networks

巾帼石榴花
乡村“她”力量

For all women, establishing support networks is crucial for rural women. Local governments or women's organizations can provide social support by establishing associations, cooperatives, or community groups for women rural entrepreneurs. These networks help women share experiences, access resources, and build connections.

Women's Federation can provide social support by establishing rural women entrepreneurs' associations, cooperatives, or community organizations to help them share experiences, access resources, and build connections.

5. Utilization of Multimedia Resources

In terms of multimedia resource utilization, modern technology-assisted education can help rural women acquire broader knowledge and skills. Online courses, mobile applications, and remote training provide convenient learning opportunities. For younger women with higher receptivity or educational attainment, additional training in technology and digital fields can be offered to help them better leverage information technology for business development.

In summary, educational approaches tailored for rural women should be differentiated based on their age, educational background, and specific needs. Governments, non-profit organizations, community groups, and businesses can all play crucial roles in this process by providing support and opportunities. This empowers rural women to achieve self-fulfillment and improve their lives through innovation and entrepreneurship.

III. Women's Autonomous Practice and Collaboration

1. Shattering Fixed Mindsets to Ignite Self-Reliance

Rural women should liberate their minds and fully recognize their own value. They should firmly believe in their capacity for innovation and entrepreneurship, cultivate a sense of autonomy, actively pursue personal dreams and goals, engage in innovative and entrepreneurial practices, and realize their aspirations on a broader stage.

Additionally, rural women should discard the outdated notion of "male supremacy and female inferiority" in traditional thinking. They should firmly embrace traditional Chinese virtues such as diligence, courage, self-reliance, and hard work, striving for women's independent status. They must not only recognize that women possess equal rights with men in all spheres of social life but also acknowledge the indelible contributions women have made to Xinjiang's social development. This will empower women to strengthen their sense of agency, further unleash their initiative, and engage in innovative and entrepreneurial endeavors.

2. Enhancing Comprehensive Quality: Integrating Theory with Practice

First, rural women should enhance their cultural literacy. Ideologically, they should study Marxism-Leninism, Mao Zedong Thought, Deng Xiaoping Theory, the important thought of the "Three Represents," the Scientific Outlook on Development, and Xi Jinping Thought on Socialism with Chinese Characteristics for a New Era. They should study the Party's policies and guidelines to maintain ideological progressiveness. Theoretically, they should diligently acquire modern scientific and cultural knowledge to arm their minds and lay a foundation for personal development. Second, in practice, rural women can take various courses and participate in vocational and skills training.

Sign up for various specialized competitions to enhance your skills, cultivate the knowledge and abilities needed for innovation and entrepreneurship, and

continuously translate theory into practice, applying knowledge to real-world situations. This fosters self-reliance, autonomous development, and the belief that wealth is earned through hard work.

to achieve prosperity.

3. Seize entrepreneurial opportunities and seek supportive partnerships

On one hand, rural women can leverage big data, the internet, and other new media to promptly gather market demand information and stay updated on government innovation and entrepreneurship support policies. They can seek assistance from relevant departments and professionals, relying on government-built platforms and resources to engage in innovation and entrepreneurship and gain insights into government innovation and entrepreneurship support policies. They can seek assistance from relevant departments and professionals, leveraging government-established platforms and resources to engage in innovation and entrepreneurship practices. On the other hand, rural women can actively utilize mass media channels like social media and online platforms. Through live streaming and experience sharing, they can showcase their innovation and entrepreneurship processes and achievements, enhancing personal visibility and influence to attract more purchasing power and investors, thereby boosting their own innovation and entrepreneurship endeavors.

Simultaneously, rural women should incorporate their inherent strengths into their entrepreneurial strategies. For instance, women often demonstrate greater meticulousness, attention to detail, and thoroughness in problem-solving compared to men. They may also possess specialized skills in sectors like agriculture or animal husbandry. By leveraging these aspects, they can select more suitable paths, enhance the focus of their ventures, and fully capitalize on their unique advantages.

Only when women recognize this mentally, act upon it practically, and tangibly experience a sense of fulfillment will they truly ignite their inner drive. This shift transforms passive participation into active engagement, propelling them to actively contribute to the rural revitalization strategy. Through participation comes gain, and through gain comes deeper involvement, creating a virtuous cycle.

巾帼石榴花
乡村“她”力量

Conclusion

This semester, we had the privilege of participating in a research project on women's education and rural revitalization, focusing on the theme: "Women's Pomegranate Blossoms: The '**She**' Power in Rural Areas—A Survey on Women's Innovation and Entrepreneurship Practices in Heshuo County and Hotan City, Xinjiang Region" (). As the "**half of the sky**" in rural development, women play an indispensable role in advancing and achieving rural revitalization. Stepping from the campus of Shanghai Normal University into Heshuo County, Bayingolin Mongol Autonomous Prefecture, Xinjiang, we were profoundly moved by the courage and wisdom of local women innovators. We witnessed the "**women's power**" driving rural revitalization under the guidance of the spirit of the 20th CPC National Congress. One by one, **these women**, with their unyielding spirit and relentless efforts, are achieving extraordinary accomplishments across various industries.

In the past, rural women's life paths seemed predetermined: washing clothes, cooking meals, supporting husbands, and raising children—leading quiet, unremarkable lives. Even when they harbored aspirations, constraints in rural areas and the prejudice and skepticism of those around them often forced them to abandon their dreams.

In recent years, regions across the country have actively responded to national initiatives, promoting the synergistic development of women's education and rural revitalization. Tailored educational programs for women have been launched nationwide. For instance, Heshuo County encourages women's innovation and entrepreneurship through training, vigorously supporting enterprising farmers with vision to rapidly increase their income. This approach continuously expands new avenues for farmers' income growth, fostering a cohort of women leaders for rural revitalization. Similarly, the Women's Federation of Tumushuk City has consistently implemented the Women's Innovation and Entrepreneurship Initiative and the Women's Rural Revitalization Initiative based on local realities. Over the past five years, it has secured various support funds and assisted numerous women's employment and entrepreneurship projects. During our field research, data analysis revealed the women of Heshuo County's renewed aspirations for enhancing their innovation and entrepreneurship capabilities, alongside their pursuit of a brighter future. We also had the opportunity to conduct telephone interviews with several women, village officials, and town mayors. We witnessed their joy during training sessions and gained a profound understanding that women's training not only equips them with new skills and knowledge but also fosters greater self-confidence. The year 2023 marks the inaugural year for implementing the guiding principles of the 20th CPC National Congress. Guided by Xi Jinping Thought on Socialism with Chinese Characteristics for a New Era, we believe that through the concerted efforts of Party committees and governments across autonomous regions and prefectures, the environment for women's entrepreneurship will become more inclusive and supportive. Increasing numbers of women will step beyond their homes to compose new chapters of women's achievements on the journey of the new era.

Appendix I Survey on Rural Women's Education in Heshuo County and Hotan City

Questionnaire

Dear Madam:

Hello! First, thank you for completing this research questionnaire. To understand the innovation and entrepreneurship status of rural women in Heshuo County, Xinjiang, we have designed this survey. There are no right or wrong answers, and you do not need to provide your name. All information will be kept strictly confidential and used solely for this research. Please answer truthfully. Thank you for your cooperation!

1. Thank you for taking the time to complete this questionnaire amidst your busy schedule. As this survey targets women, please indicate your identity: [Single Choice] *

☐ The individual

☐ Her family

☐ Her friends

☐ Her relatives

☐ Others _____

2. What is your/the other person's age? [Single-choice question] *

☐ 21-30

☐ 31-40

☐ 41-50

☐ 51-60

☐ 60 and above

3. Your/the other party's educational background? [Single-choice question] *

☐ Elementary school or below

☐ Junior high school

☐ High school

☐ College degree or higher

4. How many people live in your/the other party's household? [Single-choice question] *

☐ 2-3 people

☐ 4-5 people

☐ 6-8 people

☐ 8 or more

5. What is your/the other party's primary occupation? [Single-choice question] *

巾帼石榴花
乡村“她”力量

- ☐ Agriculture or animal husbandry
- ☐ Self-employment
- ☐ Village official
- ☐ Township enterprise employee
- ☐ Rural science, education, culture, and health work
- ☐ Other _____

6. Are you/the other party familiar with the Rural Revitalization Strategy? [Single-choice question] *

- ☐ Yes, I know the specific details
- ☐ Aware, but unfamiliar with specific details
- ☐ No, never heard of it

7. Which aspects of the "Rural Revitalization Strategy" are you/the other party familiar with? [Multiple Choice] *

- ☐ Thriving industries
- ☐ Ecological Livability
- ☐ Civic Culture
- ☐ Effective governance
- ☐ Prosperous Livelihoods

8. What role do you/the other party believe rural women play in the rural revitalization strategy? [Single-choice question] *

- ☐ Key force
- ☐ Marginal force
- ☐ Not sure

9. Have you/the respondent ever received promotional materials about supporting women's innovation and entrepreneurship? [Single-choice question] *

- ☐ Yes, and I understand the specifics
- ☐ Received, but unaware of specific details
- ☐ Not sure, never received any

10. Have you/the other party ever engaged in innovation or entrepreneurship? [Single-choice question] *

- ☐ Yes
- ☐ No
- ☐ Not sure

11. What are the reasons you/the other party are not interested in innovation and entrepreneurship? [Multiple Choice] *

- ☐ Never explored it
- ☐ Feel it is unnecessary
- ☐ Lack of relevant policy guidance
- ☐ Unclear entrepreneurial content
- ☐ Lack of technical skills/knowledge
- ☐ Lack of funding
- ☐ Low income from entrepreneurship

☐Lack of family support

☐ Other _____

Depends on the second option in Question 10

12. How did you/the other person come up with the idea for innovation or entrepreneurship? [Multiple Choice] *

☐ Idea originated independently

☐Inspiration from successful examples around me

☐Relevant promotional materials

☐ Relevant policy support

☐ Other _____

13. Which of the following best describes your/the other party's experience in innovation and entrepreneurship? [Single choice] *

☐ Rural industrial cooperatives

☐ Individual innovation and entrepreneurship

☐ Group innovation and entrepreneurship

☐ Other _____

14. Are you/the other party satisfied with the outcomes of your innovation and entrepreneurship? [Single-choice question] *

☐ Very satisfied

☐ Fairly satisfied

☐ Average

☐ Not very satisfied

15. What difficulties did you/the other party encounter during innovation and entrepreneurship? [Multiple Choice] *

☐ No difficulties at all

☐ Lack of funding

☐ Lack of technology/knowledge

☐ Unclear business concept

☐ Lack of guidance/consultation platforms

☐Absence of relevant policy guidance

☐Lack of promotional platforms

☐ Family opposition/lack of support

☐ Other _____

16. To your/the other party's knowledge, has the relevant government provided any support for innovation and entrepreneurship?

[Multiple Choice] *

☐ None

☐ Relevant policy support available

☐ Relevant training/education available

巾帼石榴花
乡村“她”力量

- ☐ Relevant promotional platforms available
- ☐ Guidance/consultation platforms available
- ☐ Relevant financial support available
- ☐ Other _____
- ☐ Not aware

17. In which areas have you/the other party received support for innovation and entrepreneurship? [Multiple choice] *

- ☐ None
- ☐ Relevant policy support
- ☐ Relevant training/education
- ☐ Relevant promotional platforms
- ☐ Relevant guidance/consultation platforms
- ☐ Relevant financial support available
- ☐ Other _____

18. Do you/the other party often feel like you have nothing to do? [Single-choice question] *

- ☐ Often feel this way
- ☐ Sometimes feel
- ☐ Occasionally feel this way
- ☐ Never feel that way

19. What do you/the other person do during free time? [Multiple Choice] *

- ☐ Watch TV, play on my phone
- ☐ Read books, exercise
- ☐ Play mahjong or cards
- ☐ Visiting neighbors and chatting
- ☐ Help children with homework
- ☐ Attending various training programs
- ☐ Going to the market
- ☐ Other _____

20. Have you/the other party participated in any government-organized training? [Single-choice question] *

- ☐ 1-2 times
- ☐ 3-4 times
- ☐ 5-6 times
- ☐ 7 times or more
- ☐ Never (Please proceed to Question 30)

21. Did you/the other party receive a completion certificate every time? [Single-choice question] *

- ☐ Received every time
- ☐ Most of the time
- ☐ Only a few times

☐ Never received

22. What was the reason for you/the other party to participate in the training? [Multiple Choice] *

- ☐ To gain knowledge, enhance skills, and secure more employment opportunities
- ☐ Enrich life and enhance personal value
- ☐ Mandatory requirement by the village committee
- ☐ To receive subsidies for participating in activities
- ☐ To expand my social network
- ☐ Cultivate personal interests
- ☐ Other _____

23. What formats do you/the other party use for training? [Multiple Choice] *

- ☐ Attending lectures
- ☐ Watching training videos online
- ☐ Field trips and study visits
- ☐ Hands-on interactive learning
- ☐ Classroom instruction
- ☐ Other _____

24. What is the occupation of the instructor teaching you/the other party? [Multiple Choice] *

- ☐ Expert
- ☐ Department Head
- ☐ Technical college instructor
- ☐ Industry Leader
- ☐ Other _____

25. What training have you/the other party participated in? [Multiple Choice] *

- ☐ Planting and animal husbandry techniques
- ☐ Agricultural product processing techniques (e.g., corn milling)
- ☐ Traditional handicrafts (e.g., embroidery)
- ☐ Business management skills
- ☐ Basic literacy skills
- ☐ Skilled trades such as barbering and baking
- ☐ Red culture advocacy
- ☐ Other _____

26. How was your/their experience? [Single-choice question] *

- ☐ Excellent
- ☐ Fairly good

巾帼石榴花
乡村“她”力量

☐Average

☐Very poor

27. What aspects did you/the other party find good about the experience? [Multiple Choice] *

☐ Rich and practical content

☐ Beautiful and comfortable environment

☐ Well-equipped facilities

☐ Teachers are professional and dedicated

28. What areas do you/the other party feel need improvement? [Multiple Choice] *

☐ Insufficient content

☐ Outdated content

☐ Poor environment

☐ Insufficient facilities

☐ Outdated facilities

☐ Insufficient Teacher Competency

29. Do you/the other party believe that education or training has played a role in your innovation and entrepreneurship?

[Single-choice question] *

☐Very much

☐Moderately

☐Not at all

☐Not sure

30. What do you/the other party believe are the reasons that would hinder your/their participation in education and training? [Multiple Choice] *

☐ Lack of relevant information

☐ Too many responsibilities, lack of time and energy

☐ Cost is too high

☐ Too far from home, inconvenient to travel

☐ Participation in learning or training is meaningless

☐ Restrictions on who can participate prevent me from joining

☐ Too old to learn

☐ Content is not of personal interest

☐ Other reasons _____

31. What factors do you/the respondent believe hinder rural women's participation in rural revitalization? [Multiple choice]

*

☐ Traditional mindset of "men working outside the home, women managing household affairs"

☐ Low educational attainment among rural women

☐ Society's insufficient recognition of women

☐ Women's insufficient recognition of their own status and value

☐ Other _____

Appendix II Interviews on Rural Women in Heshuo County and Hotan City

Interview Questions:

(Participants)

I. Basic Information of Survey Participants

1. Your name, age, educational background, and marital status?
2. Family composition, names, ages, employment status, and annual household income?
3. What are your household's annual expenditures? What are the main areas of spending? What percentage is allocated to cultural and educational expenses?
4. How is your household's farming and animal husbandry progressing? What are the main crops grown and livestock raised, and what is the scale of operations?

II. Women's Education and Contribution to Rural Revitalization

1. How do you assess the current development status of Heshuo County? You may address this from perspectives such as living environment, population quality, educational development, economic growth, and government governance. Given this environment, do you feel happy and fulfilled?
2. Do you believe women play a driving role in family development and rural construction? In what specific ways? What knowledge and skills do you think women need to better fulfill this role?
3. After the victory in poverty alleviation, have you participated in vocational training? How many times? Why did you participate? What were the main contents of the training? For each session, please specify the time, location, duration, and instructors. Were certificates of completion issued?
4. Among all training content, which did you find most practical? What impact did it have on you personally, your family, and society?
5. After completing the training, what factors do you believe hinder women's participation in vocational skills training? What difficulties did you encounter throughout the training process? What kind of support would you like to receive? (e.g., health issues, busy farming seasons?)
6. Are you satisfied with the vocational training you participated in? In what areas do you believe these trainings need further improvement?

巾帼石榴花
乡村“她”力量

7. If additional training programs are offered in the future, would you be willing to participate?

(Decision-makers)

1. Has the township government issued any documents or policies related to rural women's education? **How strong is the government's support?**

2. **What is the current overall situation regarding women's education and training?** **What topics are covered?** Are these programs conducted regularly? What is the schedule for these sessions?

3. Has the township organized educational training activities for rural women? If so, what types of training were offered? Were there exams? Did participants receive certificates upon completion?

4. Are there specific requirements for participants in these educational training activities? (Is participation open to anyone interested, or is it limited to impoverished households?

5. Are there age requirements? Or is it based on their educational background? How enthusiastic are rural women about participating?

6. Where are these educational training activities typically held? Who covers the funding?

7. Where do the instructors for these educational training activities come from?

8. **What do you think about the prospects for women's innovation and entrepreneurship in rural areas in the future? What issues require attention? How is the overall progress of the Beautiful Courtyard and Beautiful Village initiatives? How is the Party members taking the lead and the masses responding?**

First speaker: Ms. G

Have townships organized educational training activities for rural women?

Answer: Ms. G: Well, regarding women's education, I primarily handle the work of the People's Congress. For the People's Congress, I conduct evening classes where I explain the spirit of the 20th National Congress and the spirit of the 14th Two Sessions, as well as topics related to ethnic unity. For example: I tell them that all ethnic groups in Heshuo County—all 56 ethnicities—are like one big family. We are all part of the Chinese nation. As members of the Chinese nation, we love our motherland, our hometown, and our Heshuo. Ethnic unity is the lifeline of our people. We must cherish it as we cherish our own eyes. This year, Heshuo County has been recognized as an advanced county for ethnic unity in Bayingolin Mongol Autonomous Prefecture.

I'd like to know—when you held these night classes, did many people participate?

Answer: Ms. G: Quite a few. When we held the night school sessions, there were over 40 or 30 people attending. When we held the night school here in A Village, I explained the spirit of the 20th National Congress and also discussed the spirit of the two sessions of the 14th National People's Congress.

What was the theme of the 20th National Congress? It was the great banner of socialism with Chinese characteristics. We emphasized implementing Xi Jinping Thought on Socialism with Chinese Characteristics for a New Era and promoting the great founding spirit of the Party. These are the messages we conveyed to our people.

So this was held once a week?

Ms. G: Yes, once a week. After the flag-raising ceremony, we held the night school sessions. I gave three lectures on the spirit of the Two Sessions of the National People's Congress. I also visited the individual shop owners on the street to explain the spirit of the 20th National Congress and the Two Sessions to them. I have records of all this in my notebook. I even have photos. I just kept promoting it.

So besides this, is there anything else in our village? Like training programs to help women find jobs?

Ms. G: For women's training, there's cooking classes for chefs, hairdressing courses, and culinary training. The government arranged instructors to teach us practical skills. After learning these, we can use our abilities to open shops or hair salons.

For instance, one villager opened a liangpi noodle shop after completing the cooking training. Another villager also opened a liangpi noodle shop. The instructors from above taught them how to make it, and now they've both opened shops like this in the village.

There's also training in cattle farming techniques. When they held the training in our village, it lasted a month. a full month. Since we have nothing to do in winter, each household sent one person to learn this farming technique. After completing the training, we had to take an exam. Those who passed received certificates issued to our villagers.

Are these training sessions primarily for impoverished households, or can anyone participate?

Ms. G: All these training activities are open to participation. Our village organizes them independently. After organizing, all the women attend training at our Cha Village Committee. Last month, the training covered sheep and cattle farming knowledge. For cattle farming, a specialist instructor came to teach people of all ethnicities. After the lecture, they went to our cattle pens to demonstrate how to raise cattle—how much water to give per feeding, how much feed to provide, and so on. The instructor then took the trainees, people of all ethnicities, to our sheep pens and cattle pens.

Where did the instructors for these educational training activities come from?

Ms. G: The instructors for Chacun Village were sent by the Korla Working Group. Korla Prefecture is paired with our Chacun Village. They arranged for qualified teachers to come and give lectures.

Do our trainees need to pay tuition fees?

Ms. G: It's free for farmers. All farmers attend at no cost—the government funds these educational programs for them.

Second speaker, Mr. Z

I'd like to know if any skill training programs for women are being offered in our villages?

Mr. Z: Yes, specifically in animal husbandry techniques. Our training sessions are usually held on weekends. Over the past two years, well, both farming and herding households have had training programs running. Our village is a herding village, so everyone is involved in animal husbandry.

How exactly are these programs conducted? Are they held at the village committee?

Mr. Z: Specialized instructors come to train farmers and herders. Training usually happens at the village committee. It's scheduled around farming seasons—more sessions during the off-season, which is mostly in winter.

I saw on the official account that our village has an embroidery cooperative? Is it still operating normally?

Mr. Z: That project was part of the 2019 initiative, but it's no longer active. **What might have caused the cooperative to shut down?**

Mr. Z: It had already closed by the time I joined the work, so I'm not entirely sure of the specific reasons.

巾帼石榴花
乡村“她”力量

Third participant, Ms. T

I'd like to ask if our village offers any women's education and training programs?

Ms. T: Regarding women's issues, we do offer gynecological examinations. I'm not entirely sure about the availability of such training programs now.

Were there any before?

Ms. T: Yes, and we still do. But people don't have time to attend now. They're all working away from home. Some families who tend sheep have already gone up to the mountains.

What kinds of programs were offered before?

Ms. T: Previously, there were livestock farming courses. Hmm, plus culinary training and handicrafts like embroidery. The village arranges these for women now, but they aren't very enthusiastic about attending. Some do participate consistently, but not many.

So who brought in these instructors? Were they from the township?

Ms. T: Our village, Qia Village, is partnered with Korla. They sent people from Korla to train us. Last winter we also learned horticulture techniques—how to prune fruit trees. It lasted a month. Back then, attendance was high—over 40 people, nearly 50.

How was the horticulture training scheduled? Once a week, or twice a week?

Ms. T: It was a continuous month-long training. We went every day. I attended from 10 AM to 12 PM and then from 4 PM to 6 PM. The cooking training was in the evenings—every night for a month.

Was there an exam at the end?

Yes, after completing the exam, they gave us certificates. We also learned electrical skills, like operating welding machines, and that had an exam too.

So, Auntie, when you participated, how did you find the teachers? Did you learn some basic gardening skills?

Ms. T: Yes, the instructor explained everything exceptionally well and in great detail. The only downside was that the certificate had an age restriction. Since I was over the age limit, I didn't receive the certificate, which was a real shame.

Fourth: Ms. H

Let's learn about the women's training program in our village.

Ms. H : Women's training, right? At the end of last year, we launched a tile-laying course, followed by

a horticulture skills program, and a cooking course. The cooking class had the highest participation among the women, though women also joined the other two programs.

So these programs lasted less than a month—did they attend daily, or just once a week?

Ms. H: Daily attendance. Six days a week—five days of training and one day off. The program lasted about 41 days.

Were there exams?

Ms. H: The exams are administered by the autonomous region—they're official exams, and they issue admission tickets. The cooking program has both written and practical exams. We were divided into five groups, and based on what they learned, they were given specific tasks. After preparing the dishes assigned by the examiners, we presented them for evaluation, correct?

Did they receive a certificate of completion?

Ms. H: Yes, definitely. Especially for cooking and horticulture skills. The autonomous region issues very formal certificates, similar to university diplomas. They'll issue that kind of formal graduation certificate, but the certificates haven't been distributed to us yet.

Are these training programs open to anyone interested, or are they specifically for impoverished households?

Ms. H: It's for our entire village. Yes, for those aged 20 to 55. Based on age, **do they consider educational background?**

Ms. H: There are no educational requirements. **Who primarily conducts these trainings?**

Ms. H: The township coordinates it. Each village hosts sessions—this month it's in our village, next month in Gu Village, then A Village, and so on.

Is there a policy for this?

Ms. H: Yes, it's to help us run these activities. This training was developed in partnership with the technical school.

Do our villagers actually apply what they learn in practice?

Ms. H: Yes, some women are now running restaurants. We already have one, two... three—three of them.

巾帼石榴花
乡村“她”力量

Have these three restaurants already opened?

Ms. H: One of them is right up ahead. After coming here for the training, they reinforced their skills, got their certificate, and opened a liangpi noodle shop. This cooking training has been running continuously for three years now, every year. Since women learn cooking at home, it's a great way to prepare delicious meals for their families, right? That's why we hold this cooking training annually.

Will we continue these activities in the future?

Ms. H: Future programs will likely be based on what our villagers want to learn. For instance, we previously offered welding training because men tend to prefer hands-on work like that. So we organized welding skills training for them. Moving forward, we'll likely organize training activities based on our villagers' interests and hobbies.

Fifth speaker: Ms. D

What are the main ways we currently support women's continuing education?

Ms. D: Monday flag-raising ceremonies and night school sessions for Mandarin training. For Mandarin instruction, we have teachers from schools providing support. These include school teachers, members of our work team, and village cadres who also serve as Mandarin instructors. The school teachers are from Usho County. The first method is a more formal learning approach. The second involves our assigned cadres visiting households to introduce new knowledge and methods. For instance, we discuss topics like the 20th National Congress and new policies to help them understand Mandarin concepts and improve their language skills. Additionally, we leverage the children in the household. Since our children now receive Mandarin education, we employ the "children teaching adults" approach—small hands guiding big hands. This way, children teach adults to recognize Mandarin characters, learn pinyin, and simple Chinese characters, along with some revolutionary songs.

Do we have any skill-training activities to help women learn new technologies?

Ms. D: We utilize their free time. During the agricultural off-season, we invite professional instructors from the Farmers' Technical School to teach them. The teachers tailor their lessons based on their expertise. For instance, during the off-season, we organize classes like construction, animal husbandry, and crop cultivation through the Farmers' Technical School. We also offer courses in beauty, hairdressing, and sewing.

Where do these instructors come from?

Ms. D: These instructors are from our county's vocational schools—professional teachers from our county's technical institutions, and some instructors come from the prefecture level.

Do our students pay tuition for these classes?

Ms. D: They attend the technical school as day students, and it's free. Teachers who come to rural areas generally provide their services free of charge. There are no fees whatsoever, including textbooks, workbooks, and other materials—all are provided free of charge.

Are there age requirements for participants?

Ms. D: Yes, the age range is 18 to 45. We may extend it to 50 at most. Although that's the requirement, we've had participants around 60 join each time.

Do they receive certificates upon completing the training?

Ms. D: Yes, certificates are issued for all technical school training programs.

Is there an age requirement for the certificate? Or is it issued to anyone who completes the training and passes the exam?

Ms. D: The certificate does have an age requirement. Only trainees aged 18-45 who complete the training and pass the exam are eligible.

Do the women who complete the training apply what they learn in practice?

Ms. D: Yes, for example, those who learn hairdressing at the technical school. After completing the hairdressing course, we can help them apply for the Women's Federation's Love Donation Fund and other programs to secure a Love Entrepreneurship and Employment Fund. This portion of the fund is used to support their entrepreneurship and employment. For instance, if someone wants to open a beauty salon, we provide a set of hairdressing equipment upfront for trainees who plan to open a beauty or hairdressing salon. This includes hardware like shampoo chairs, scissors, and blow dryers—basically, she doesn't need to pay for these herself. We also regularly recommend further training opportunities to help her improve her skills.

She needs to keep learning, right?

Ms. D: Exactly, it's not like you learn everything in one go. For instance, right now it's May to June, and we have an opportunity to go to Zhejiang for beauty and hairdressing training. While she's learning there, she's also studied at the provincial and autonomous regional levels. For her, if she wants to advance further in hairdressing, she'll go to other schools for training. Beyond that, if someone has a serious illness or a family member faces major

巾帼石榴花
乡村“她”力量

requiring assistance, we can also apply for relief through the Women's Federation.

Approximately 10,000 yuan.

I heard we're conducting universal health screenings for villagers, is that correct?

Ms. D: Yes. Recently, we've been conducting "two-cancer screenings." We carry out these screenings annually for women, specifically for breast and cervical cancer. If any cases are detected, we provide financial assistance. These screenings are also free of charge. These two-cancer screenings, along with our annual comprehensive health checkups, also support our women's health initiatives. Rural women often lack strong health awareness, so these screenings help identify potential issues early—even if not definitively diagnosed—enabling preventive measures.

Do you think there are any other issues that need attention now?

Ms. D: The immediate concern might be that, since this is a two-cancer screening program, we need to address difficulties faced by families beyond the scope of these assistance programs.

For instance, if the male head of household becomes incapacitated due to serious illness, the resulting loss of labor means the entire burden of livelihood falls on the women. For women, their employment opportunities and capabilities in society are relatively weaker. In rural areas, unlike urban settings, most work involves heavy physical labor. So when it comes to employment assistance, there aren't particularly effective support methods available. You can't just target this specific household issue. I can't say that only officials should help them. If you provide too much assistance to one family, might it create feelings of imbalance among others? For this group, we generally apply for temporary assistance for them. But applying for temporary assistance has two conditions: it can only be applied for when the amount exceeds 30,000 yuan

For expenses under 30,000 yuan, if the family genuinely faces health crises—like a breadwinner falling ill while the wife stays home with children—Their household isn't exactly well-off. While they have some savings, it's not substantial. When faced with illness, their financial reserves prove inadequate. Unlike urban women, rural women face physically demanding farm labor. After doing such hard work, they can't care for their children or manage the household, right? Since the man can't do this heavy labor, the pressure falls heavily on the woman. Well, that's basically the situation.
